Attention: Joshua M. Sewald, PE, PP

Senior Principal

Regarding: PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

Vacant Land

2615 U.S. Route 9 West Parcel No. 9-1-25.22

Town of Cornwall, Orange County, New York Dynamic Earth Project No.: 2803-98-012E

Dear Mr. Sewald:

Dynamic Earth, LLC (Dynamic Earth) is pleased to submit for your review the attached *Phase I Environmental Site Assessment Report* for the above-referenced Site. Please contact us with any questions or comments regarding the enclosed report.

Sincerely,

DYNAMIC EARTH, LLC

David F. Backman Principal

EXECUTIVE SUMMARY

Dynamic Earth, LLC (Dynamic Earth) was retained by Dynamic Engineering Consultants, PC on behalf of Treetop Development to perform a Phase I Environmental Site Assessment (ESA) of the vacant land located at 2615 U.S. Route 9 West in the Town of Cornwall, Orange County, New York. The Site is identified further as Parcel No. 9-1-25.22 (hereinafter referred to as the "Site"). The Site reconnaissance was conducted on January 8, 2021. A *Site Location Map* and *Existing Conditions Plan* are included as Figures 1 and 2, respectively.

The Site comprises approximately 197.7 acres and primarily consists of wooded land with several trails. Several areas of surface water/wetlands were observed in the central, southern and southwestern portions of the Site. Remnants of unknown concrete structure/wall (possible old bridge) were observed in the northeastern portion of the Site. An unpaved trail suspected to be associated with an underground natural gas pipeline was observed to the north and west of the Site.

No recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs) or historical recognized environmental conditions (HRECs) as defined by ASTM E1527-13 were identified during this study.

Items that are not identified as RECs, however, may require limited investigation or corrective action as business environmental risks (BERs) are summarized in Section 8.3 of this report.

1.0 INTRODUCTION

Dynamic Earth, LLC (Dynamic Earth) was retained by Dynamic Engineering Consultants, PC on behalf of Treetop Development to perform a Phase I Environmental Site Assessment (ESA) of the vacant land located at 2615 U.S. Route 9 West in the Town of Cornwall, Orange County, New York. The Site is identified further as Parcel No. 9-1-25.22 (hereinafter referred to as the "Site"). This report documents the findings, conclusions, and recommendations of the Phase I ESA.

1.1 Purpose and Scope of Work

A Phase I ESA includes Site research and visual evaluation regarding potential environmental concerns which may require further evaluation. The Phase I ESA does not include any sampling, testing or intrusive investigation of potential environmental concerns, asbestos containing materials (ACM), or lead based paint (LBP). Such services may be proposed separately, if requested.

Dynamic Earth conducted this Phase I ESA in general accordance with ASTM *Standard Practice for Environmental Site Assessments* (E1527-13). The Phase I ESA is intended to satisfy the *All Appropriate Inquiry Rule* (AAI) and qualitatively identify recognized environmental conditions (RECs) that may require further evaluation or corrective action. The Phase I ESA included the following activities:

- Confirming current site ownership through the local or county tax assessor's office and evaluating historical ownership and land use to the extent that such records are readily available;
- Utilizing on-line services to access federal and state databases to determine if reported environmental conditions exist on Site or on adjacent or nearby properties;
- Conducting a search for and review of Sanborn Fire Insurance Maps, City Directories, aerial photographs and historical topographic maps, if available;
- Interviewing current and/or past owners/occupants of the Site or owners/occupants of neighboring property, as necessary;
- Performing a reconnaissance of the property to identify and assess potential recognized environmental conditions and adjacent property usage;
- Accessing and reviewing publicly-available records and/or interviewing officials at federal, state, local, and/or tribal regulatory agencies to determine if past or current environmental enforcement, investigative or corrective actions have been implemented at or in the vicinity of the property; and
- Preparing a Phase I ESA report of findings, conclusions, and recommendations.

The Phase I ESA is intended to identify RECs, controlled recognized environmental conditions (CRECs), and historical recognized environmental conditions (HRECs), at the Site. These conditions are defined as follows:

- **REC:** The term "recognized environmental condition" refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment;
- CREC: The term "controlled recognized environmental condition" refers to a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls;
- **HREC:** The term "historical recognized environmental condition" refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by the regulatory authority without subjecting the property to any required controls;

The Phase I ESA is designed to satisfy AAI of ASTM Standard Practice E1527-13.

A business environmental risk (BER) is defined by ASTM E1527-13 as a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel or commercial real estate.

1.2 Limitations and Exceptions of Assessment

Information contained in this report was obtained from document research, government databases, interviews, and observations. The information obtained as part of the assessment does not imply that Dynamic Earth has acquired all pertinent information or data that exist.

The assessment is intended to identify environmental conditions that are obvious to an environmental professional. It is not intended to represent exhaustive research of all potential RECs that may exist. Any RECs, CRECs, and HRECs noted in this report may require a more detailed comprehensive study to characterize the nature and extent of contamination and to further evaluate possible environmental and financial implications.

As part of the agreement with the client, Dynamic Earth has conducted the Phase I ESA in accordance with ASTM Standard E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. This assessment is not intended for reuse by third parties or execution of alternate projects.

This report does not represent or imply future Site conditions or events. Situations or activities that occur subsequent to this report that result in adverse environmental impacts are not relevant to this assessment.

1.3 User Reliance

Dynamic Engineering Consultants, PC, Treetop Development, their successors, representatives, and/or assigns may rely upon the findings and conclusions of this document. This document was prepared for the sole use of Dynamic Engineering Consultants, PC, Treetop Development, their successors, representatives, and assigns, and should not be relied upon by any third party without Dynamic Earth's written consent.

2.0 SITE DESCRIPTION

A current description of the Site including location, improvements, current and former uses, utilities, surrounding properties, topography, geology, and hydrology/hydrogeology is summarized in the following table:

Site Location:	2615 U.S. Route 9 West Town of Cornwall, Orange County, New York Parcel No. 9-1-25.22 Latitude: 41.45102, Longitude: 74.03904				
Total Acreage:	197.7 acre	S			
Site Improvements:	The Site primarily consists of wooded land with several dirt trails. Several areas of surface water/wetlands were observed in the central, southern and southwestern portions of the Site. Remnants of unknown concrete structure/wall (possible old bridge) were observed in the northeastern portion of the Site.				
Current Uses of Site:	The Site currently consists of undeveloped, primarily wooded land.				
Former Uses of Site:	According to 1940, 1942, 1973 and 1985 aerial photographs, the Site or portions thereof historically were used for agricultural purposes. One structure (use not documented) was depicted in the northern-northeastern portion of the Site on the 1947 topographic map. According to the Site owner representative, Christina Amato, the Site had never been developed.				
Site Utilities:	Electric:	The Site currently is undeveloped and not serviced by utilities. Overhead electric lines were observed along Route 9 to the east of the Site.			
	Natural Gas:	The Site currently is undeveloped and not serviced by utilities. Markers associated with an underground natural gas line were observed along a trail to the north and west of the Site.			
	Water:	The Site currently is undeveloped and not serviced by utilities. A suspected water well was observed in the northeastern portion of the Site.			
	Sanitary Sewer:	The Site currently is undeveloped and not serviced by utilities. No evidence of abandoned septic systems was observed on-Site. A wastewater treatment plant is located immediately southwest of the Site.			
	Storm Sewer:	Not observed.			
	None.				
Surrounding Properties:	North:	Lehto's Relocation Services Corporation and residential properties			
- 30 p 3 - 30 p	South:	Cadet Motel, residential properties, restaurants, and Orange County Radiation Oncology			

	East:	Residential properties and Thor Performance Products beyond Route 9			
	West:	Firthcliff Wastewater Treatment Plant, Moodna Creek, wooded land and residential properties			
Topography:	high eleva	pography at the Site generally slopes downward toward the north-northeast with a gh elevation of 238 feet above mean sea level (msl) in the south-southwestern portion the Site to a low elevation of 140 feet above msl in the north-northeastern portion of e Site.			
Geology:	According to the 1989 Surficial Geology of New York – Lower Hudson Sheet, surficial geology at the Site consists of Outwash Sand and Gravel (og). Specifically, the Site underlain by coarse to fine gravel with sand, proglacial fluvial deposition, well rounded and stratified, generally finer texture away from ice border, thickness variable. According to the 1970 Geologic Map of New York – Lower Hudson Sheet, bedrock geology underlying the Site includes the Normanskill Formation consisting of shale, argillite, and silt-stone.				
Hydrology/ Hydrogeology:	to an Apr Surveying portions o Flood Inst The Site is A 100-year	atter depth and flow direction was not readily available for the Site. According ril 20, 2017 Wetlands Map prepared by Lanc & Tully Engineering and P.C., wetland areas are located in the central, southern and southwestern of the Site. The Federal Emergency Management Agency (FEMA), National brance Program (NFIP), Flood Plains Map was reviewed by Dynamic Earth. It is not located within a 100-year or 500-year flood zone as defined by FEMA. It or 500-year flood represents a flood event of a magnitude expected to be a exceeded (one percent chance of occurring each year) during any 100-year are period.			

3.0 SITE HISTORY

3.1 Site Ownership/Occupancy

According to the Orange County Image Mate Online, the Site currently is and has been owned by Cornwall Commons LLC since January 29, 2007. The previous owner was identified as Bank of New York.

The Site currently is undeveloped, primarily wooded land.

3.2 Fire Insurance Maps

Environmental Data Resources, Inc. (EDR) was engaged to retrieve available Sanborn Fire Insurance Maps for the Site. Sanborn Fire Insurance Map coverage was not available for the Site or surrounding area. The EDR Sanborn Map Report is included in Appendix A.

3.3 City Directories

EDR was engaged to retrieve available city directories for the Site. The City Directory report is provided in Appendix A. Historic site occupants (2615 U.S. Route 9 West) and years of operation are included as follows:

• 1992-2017: Address not identified in research sources

3.4 Historical Aerial Photographs

EDR was commissioned to provide an Aerial Photo Decade Package for the Site. Aerial photographs were procured from EDR for the years 1940, 1942, 1958, 1962, 1973, 1975, 1985, 1995, 2006, 2009, 2013 and 2017. The EDR aerial photographs are included Appendix A.

In 1940, the Site was undeveloped and consisted of agricultural and wooded land. The surrounding properties consisted of agricultural and wooded land with sporadic residential properties. A railroad was located to the north and west of the Site and Moodna Creek was apparent beyond the railroad lines.

1942: In 1942, the Site and surrounding properties remained relatively unchanged; however, U.S. Route 9 had been constructed to the west of the Site.

1958-1962: The Site consisted predominantly of wooded land with agricultural land in the northeastern portion of the Site between 1958 and 1962. Additional residential development appeared to have occurred to the south and east of the Site, and a suspected commercial structure appeared to have been built to the northeast of the Site.

1973: In 1973, the majority of the Site remained heavily wooded; however, an area in the

northern portion of the Site was cleared for suspected agricultural use. No significant

changes were apparent to the surrounding properties between 1962 and 1973.

1975-1985: The Site and surrounding properties remained relatively unchanged.

1995: The Site and surrounding properties remained relatively unchanged; however, the

northern portion of the Site no longer appeared to be used for agricultural purposes.

2006-2017: The entire Site was heavily wooded. No significant changes were apparent to the

surrounding properties between 1995 and 2017.

3.5 Historical Topographic Maps

EDR was commissioned to provide a Historical Topographic Map Report for the Site. *Topographic Quadrangles* were procured for the years 1902, 1930, 1935, 1941, 1947, 1957, 1981, 1994 and 2013. These maps are included in Appendix A. The Western Railroad was depicted to the north and west of the Site on the 1902 topographic map. The Catskill Aqueduct was depicted running through the southwestern portion of the Site on all of the topographic maps. An unknown structure was depicted in the northern portion of the Site on the 1947 topographic map. Structures were not depicted on any of the other topographic maps reviewed. No structures are depicted on the 2013 USGS map, only roadways and topography.

4.0 USER-PROVIDED INFORMATION

The following section summarizes information provided by the client regarding the *User* responsibilities as outlined in ASTM *Standard E1527-13*.

4.1 User Questionnaire

The User provided the following responses pertaining to the Site. A copy of the completed User Questionnaire is included in Appendix F.

Question	Response
Name of Preparer and Entity	Aaron Stickney Director of Development Treetop Development
Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?	No
Are you aware of any Activity and Use Limitations, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?	No
Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	No
Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?	No
Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user: Do you know the past uses of the property? Do you know of specific chemicals that are present or once were present at the property? Do you know of spills or other chemical releases that have taken place at the property? Do you know of any environmental cleanups that have taken place at the property?	No

Question	Response
Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?	No

4.2 Environmental Liens and Activity Use Limitations

To date, a title report has not been provided for review. The User and/or Owner provided no specialized knowledge of environmental liens or AULs on the Site.

4.3 Specialized Knowledge

The User and/or Owner provided no specialized knowledge relative to RECs at the Site.

4.4 Commonly Known or Reasonably Ascertainable Information

The User and/or Owner did not provide any commonly known or reasonable ascertainable information that is material to RECs at the Site. According to the Site owner, the Site has never been developed.

4.5 Valuation Reduction for Environmental Issues

The User and/or Owner provided no information regarding valuation reductions for environmental issues related to the Site.

4.6 Owner, Property Manager, and Occupant Information

Owner: Cornwall Commons, LLC

Woodbury Professional Boulevard

P.O. Box 503 615 Route 32

Highland Mills, New York 10930

Property Manager: Christina Amato, Owner Representative

Kent Companies P.O. Box 503 615 Route 32

Highland Mills, New York 10930

Phone: (845) 928-9121

Occupants: The Site currently is unoccupied.

4.7 Reason for Performing the Phase I ESA

It is the understanding of Dynamic Earth that the Phase I ESA is being performed as part of a prospective buyer/tenant due diligence evaluation.

5.0 RECORDS REVIEW

5.1 Federal and State Database Search

EDR was engaged to conduct a search of federal and state databases relating to contaminated properties and other facilities that may potentially impact the Site. The EDR report meets the approximate minimum search distances as defined by ASTM *Standard E1527-13*. The EDR report is provided for reference in Appendix A. This report includes a map depicting all "plotted" facilities of concern. Plotted facilities are properties that have been located by address or by latitudinal and longitudinal coordinates.

Plotted locations of facilities included in the EDR report are not always accurate. Dynamic Earth uses information from other sources, such as publicly available geographic information systems (GIS) databases and direct observations, when data included in the EDR report are determined or suspected to be inaccurate.

The EDR report identified 10 "orphan" list properties. Properties on the orphan list are facilities that could not accurately be plotted due to inadequate location information. None of the facilities included on the orphan list were identified as being associated with the Site.

5.1.1 Site Database Search

Dynamic Earth reviewed the EDR report to determine if the Site was identified within the applicable ASTM search radii. The Site was identified on the following environmental regulatory databases:

NY SPDES

The Site is identified twice on the New York State Pollutant Discharge Elimination System (NY SPDES) environmental regulatory database under Cornwall Commons located at 2615 Route 9W. The NY SPDES is a program for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. These listings are suspected to be associated with construction activities proposed in 2004 and 2011 by Cornwall Commons, LLC, the current owner. No other information pertaining to these listings were available in the database report.

5.1.2 Off-Site Property Database Search

The EDR report also was reviewed to identify off-site facilities that are located within the applicable ASTM search radii. The following is a summary of EDR listings located within close proximity to the Site.

Database	Search Distance	Number of Sites Identified
		Within Search Distance
NPL	1.5 mile	1

Database	Search Distance	Number of Sites Identified Within Search Distance
Federal SEMS (formerly CERCLIS)	1.0 mile	2
Federal SEMS Archive (formerly CERCLIS NFRAP)	1.0 mile	0

EDR Hist Auto	0.625 mile	8
EDR Hist Cleaner	0.625 mile	2
NY RGA HWS	0.5 mile	1

The databases listed above were reviewed to determine if the potential exists for contamination to migrate to the Site from adjoining and nearby facilities. No nearby facilities were considered to be a potential environmental risk to the Site due to their closed case statuses, distances and/or downgradient locations from the Site. Furthermore, environmental liability associated with migration of contaminants (if any) to the Site from off-site locations would be the responsibility of the owner/operator of the property or properties from which the contamination is emanating. For additional information on specific database results, please see the EDR Radius Map Report included in Appendix A.

5.1.3 NYSDEC Environmental Facilities Navigator

Dynamic Earth conducted a review of the New York State Department of Environmental Conservation (NYSDEC)'s Environmental Facilities Navigator online Database and the Site was not identified on the Department's database listings.

5.2 Additional Environmental Record Searches

5.2.1 NYSDEC Records

On January 6, 2021, Dynamic Earth submitted requests to the New York State Department of Environmental Conservation (NYSDEC) for access to government records under the Freedom of Information Law (FOIL, Public Officers Law, Article 6, Sections 84-90). According to January 12, 2021 and January 21, 2021 responses, no files were found pertaining to the Site. The response noted that the Site is located in close proximity to a State Superfund Site identified as Majestic Weaving Corporation located at 2 Mill Street, approximately 0.35 mile southwest of the Site. According to information provided on NYSDEC's Superfund Program online database, this nearby property was proposed to be delisted from the State Superfund Program as it no longer presented a threat to public health or the environment in 2016. Remedial action included removal of contaminated soil and drums containing hazardous waste. Sampling indicated groundwater was not contaminated, the soil met the cleanup requirements for residential use, and soil vapor intrusion was not a concern. Based on this information, impacts to subsurface conditions from this nearby property are not anticipated. Copies of the FOIL requests and responses are included in Appendix B.

5.2.2 Orange County

On January 6, 2021, Dynamic Earth submitted FOIL requests to the Orange County Department of Health to review available government records pertaining to historic use of the Site and the release or potential release of petroleum products or hazardous substances. A response from the Orange County Department of Health has not been received to date. A copy of the FOIL request is included in Appendix B.

5.2.3 Town of Cornwall

On January 6, 2021, Dynamic Earth submitted FOIL requests to the Town of Cornwall to review available government records pertaining to historic use of the Site and the release or potential release of petroleum products or hazardous substances. A response from the Town of Cornwall has not been received to date. A copy of the FOIL request is included in Appendix B.

5.3 Data Gaps/Failures

The following data gaps/failures were identified for the Site:

- To date, a title report has not been provided for review.
- FOIL responses from the Orange County Department of Health and the Town of Cornwall have not been received to date.

Based on the history of the Site, these data gaps/failures are not likely to represent significant missing/incomplete information that, if available, would alter the opinion of the Environmental Professional.

6.0 SITE RECONNAISSANCE

The observations noted below were made during a visit to the Site by Christopher Ryback of Dynamic Earth on January 8, 2021. Photographs taken during the reconnaissance are included in Appendix C.

6.1 Site Description

A detailed description of the Site and Site improvements is provided in Section 2.0 of this report.

6.2 Roads

The Site can be accessed from Route 9 to the east of the Site. No roads were located on Site.

6.3 Potable Water Supply

The Site currently is undeveloped and not serviced by utilities. An old suspected water well was observed in the northeastern portion of the Site.

6.4 Sewage Disposal Systems

The Site currently is undeveloped and not serviced by utilities. No evidence of abandoned septic systems was observed on-Site.

6.5 Heating/Cooling Source

The Site currently is undeveloped and not serviced by utilities.

6.6 Site Observations

Site observations are provided in the following table:

Interior and Exterior Observations	Identified (Yes or No)	Description	Picture #*
Underground Storage Tanks	No		NA
Aboveground Storage Tanks	No		NA
Odors	No		NA
Pools of Liquid	No		NA

	Identified (Yes or No)	Description	Picture #*
Drums	No		NA
Unidentified Substance Containers	No		NA
Potential Polychlorinated Biphenyl (PCB)-Containing Equipment	No		NA
Exterior Observations			
Hazardous Materials or Petroleum Product Containers	No		NA
Pits, Ponds, and Lagoons	No		NA
Stained Soil or Pavement	No		NA
Stressed Vegetation	No		NA
Solid Waste	No		NA
Wastewater	No		NA
Wells	Yes	A suspected water well was observed in the northeastern portion of the Site.	9
Septic Systems	No		NA
Current or Past Agricultural Activity	Yes	Portions of the Site have been used for agricultural purposes from at least 1940 to at least 1985.	NA
Interior Observations			
Hazardous Materials or Petroleum Product Containers	No structures currently are located on Site.		
Stains or Corrosion	No structures currently are located on Site.		
Drains and Sumps	No structures currently are located on Site.		
NA = Not applicable or available	•		

^{*}Photographs are included in Appendix C.

6.7 Vapor Encroachment Conditions (VECs)

A review of available information was conducted to evaluate the potential for a vapor encroachment condition (VEC) to exist at the Site. A VEC is defined as the presence or likely presence of vapor migration to the surface and/or subsurface of the subject property resulting from contaminant plume(s) of chemicals of concern (COC) on or in the vicinity of the Site. Based upon the documentation reviewed by Dynamic Earth, no off-site properties with the potential to result in a VEC were identified during this Phase I ESA.

6.8 Non-Scope Items/Potential Environmental Concerns (PECs)

6.8.1 Asbestos Containing Materials (ACM)

No structures currently are located on-Site, and no potential sources of ACM were observed during Dynamic Earth's Site reconnaissance.

6.8.2 Lead Based Paint (LBP)

No structures currently are located on-Site, and no potential sources of LBP were observed during Dynamic Earth's Site reconnaissance.

6.8.3 Mold/Microbial Growth

No structures currently are located on-Site, and no potential sources of mold/microbial growth were observed during Dynamic Earth's Site reconnaissance.

7.0 INTERVIEWS

Interviews conducted by Dynamic Earth with knowledgeable Site representatives and/or public officials are summarized below.

7.1 Site Owner/Owner Representative

Name, Title: Christina Amato, Owner Representative Representing: Cornwall Commons, LLC/Kent Companies

Date & Time Contacted: January 7, 2021 **Type of Interview:** Telephone

Ms. Amato stated that, to her knowledge, the Site has never been developed; however, was historically used for agricultural purposes. Ms. Amato indicated that there are several trails throughout the property and access to the Site would be best gained from the east along Route 9. She was not aware of any utilities or environmental concerns associated with the Site.

7.2 Site Manager

An interview with the Site Owner Representative/Property Manager is provided in Section 7.1 above.

7.3 Occupant

The Site is unoccupied.

7.4 Local Government Officials

No interviews with local government officials were conducted during this Phase I ESA. FOIL responses received from local government agencies are discussed in Section 5.2.

7.5 Others

No additional interviews were conducted in association with this Phase I ESA.

8.0 FINDINGS, CONCLUSIONS, AND RECOMMENDATIONS

Dynamic Earth has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 of the vacant land located at 2615 U.S. Route 9 West in the Town of Cornwall, Orange County, New York. Any exceptions to, or deletions from this practice are described in Section 1.2 of this report.

No evidence of recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs) or historical recognized environmental conditions (HRECs) that warrant further investigation or remediation were identified during this investigation.

8.1 Findings

8.1.1 REC Roster

RECs as defined by ASTM E1527-13 with the potential to impact the Site were not identified during this study.

8.1.2 CREC Roster

CRECs as defined by ASTM E1527-13 with the potential to impact the Site were not identified during this study.

8.1.3 HREC Roster

HRECs as defined by ASTM E1527-13 with the potential to impact the Site were not identified during this study.

8.2 Conclusions and Recommendations

Phase I ESA activities did not identify RECs, CRECs, or HRECs that warrant further investigation or remediation.

8.3 BER Roster

Although not identified as RECs, the following business environmental risks (BERs) may require limited investigation or corrective action:

• Former Agricultural Use: According to historic sources, the Site or portions thereof historically have been utilized for agricultural purposes between at least 1940 and at least 1985. Accordingly, historic application or misuse of pesticides, herbicides, and fertilizers could have resulted in residual contamination in on-Site soils. Shallow/near surface soils anticipated to

be generated during construction activities that cannot remain onsite could be characterized prior to or during excavation activities to evaluate management alternatives.

- <u>On-Site Wetlands:</u> According to an April 20, 2017 Wetlands Map prepared by Lanc & Tully Engineering and Surveying, P.C., wetland areas are located in the central, southern and southwestern portions of the Site. The necessary jurisdictional determinations and/or permitting (if any) should be obtained prior to future Site redevelopment activities in documented wetland areas.
- <u>Suspected Water Well:</u> A suspected water well was observed in the northeastern portion of the Site. This well should be properly abandoned by a licensed well driller prior to Site development activities.

8.4 Opinion

The BERs noted above should be properly evaluated and handled prior to or during future Site redevelopment.

SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

The following environmental professionals were involved in the preparation of this document by Dynamic Earth.

"We declare that to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR 312 and we have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standard and practices set forth in 40 CFR Part 312."

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Dynamic Earth were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

2615 US ROUTE 9W CORNWALL, NY 12518

COORDINATES

Latitude (North): 41.4510210 - 41° 27' 3.67" Longitude (West): 74.0390440 - 74° 2' 20.55"

Universal Tranverse Mercator: Zone 18 UTM X (Meters): 580267.1 UTM Y (Meters): 4589059.5

Elevation: 217 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 10/28/2020 has revealed that there is 1 NPL site within approximately 1.5 miles of the target property.

EPA Id: NYD980763841				

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 10/28/2020 has revealed that there are 2 SEMS sites within approximately 1 mile of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/14/2020 has revealed that there are 2 CORRACTS sites within approximately 1.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 RCRA-LQG site within approximately 0.75 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 5 RCRA-SQG sites within approximately 0.75 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 4 RCRA-VSQG sites within approximately 0.75 miles of the target property.

US INST CONTROLS: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROLS list, as provided by EDR, and dated 10/28/2020 has revealed that there is 1 US INST CONTROLS site within approximately 1 mile of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 08/10/2020 has revealed that there are 2 NY SHWS sites within approximately 1.5 miles of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 09/30/2020 has revealed that there are

2 NY SWF/LF sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 08/10/2020 has revealed that there are 67 NY LTANKS sites within approximately 1 mile of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 36 NY UST sites within approximately 0.75 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.75 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 08/10/2020 has revealed that there are 110 NY Spills sites within approximately 0.625 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/14/2020 has revealed that there are 17 RCRA NonGen / NLR sites within approximately 0.75 miles of the target property.

2020 COR ACTION: The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

A review of the 2020 COR ACTION list, as provided by EDR, and dated 09/30/2017 has revealed that there is 1 2020 COR ACTION site within approximately 0.75 miles of the target property.

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, has revealed that there are 2 HIST FTTS sites within approximately 0.5 miles of the target property.

US AIRS: The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

A review of the US AIRS list, as provided by EDR, has revealed that there are 2 US AIRS sites within approximately 0.5 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 1 mile of the target property.

NY SPDES: New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

A review of the NY SPDES list, as provided by EDR, and dated 07/28/2020 has revealed that there are 14 NY SPDES sites within approximately 0.5 miles of the target property.

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 12/01/2018 has revealed that there is 1 NY VAPOR REOPENED site within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 8 EDR Hist Auto sites within approximately 0.625 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.625 miles of the target property.

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

NY RGA HWS: The EDR Recovered Government Archive State Hazardous Waste database provides a list of SHWS incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Environmental Conservation in New York.

A review of the NY RGA HWS list, as provided by EDR, has revealed that there is 1 NY RGA HWS site within approximately 0.5 miles of the target property.

Summary Details:

Conditions at listing September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated I.I million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when thelevel of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabili e the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act CWA) that included the Hudson River PCB Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authori e a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating

Site Database(s) EPA ID Number

HUDSON RIVER PCBS (Continued)

1000384273

EDR ID Number

various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action atthe remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for partiespotentially responsible for wastes associated with the site has been completed, and EPA has sent letters to two potentially responsible parties notifying them of possible legal action under CERCLA.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: "06/12/06: CALLED FOR UPDATE -- LEFT MESSAGE WITH CALLER OLD SPILL #

ON THIS PROPERTY 89-02153 RA 6/20- Site inspection. Mike Furlong of

ATC Associates (consultant for RP) was on site. I also spoke with Paul Brzozowski of ATC, the project manager, by phone. ATC reports that impact area of #6 oil has been delineated by performing test pits around open excavation with #6 oil impacts. Approx. 300 cu. yards of petroleum impacted soils have already been excavated, stabilized and stockpiled on site. Further cleanup is pending approval of attorney for RP. 7/25/06- Met on site with Precision Env. Services. PES to provide DEC with cost estimate for cleanup of oil impacts. M. Furlong of ATC was on site. Petroleum impacted soil previously excavated are still stockpiled on site. 11/2/06- Disposal samples indicate presence of PCB in media at site. 12/5/06-

Conceptual Approval memo prepared and submitted per P. John. Memo disapproved by Division. Advised to proceed with project following week. 12/14/06- Contacted contractor to proceed with additional investigation to identify impacts of oil in subsurface along with PCB concentrations in area of impact. Contractor advised DEC that due to current workload, upcoming holidays, vacations; that this work would be scheduled in early January. 03/28/2007- On site with Paul John of DEC and Paul Ciminello of Ecosystem Strategies for owner. #6 oil excavation being backfilled today. Process being hampered by large amount of water in excavation. Paul John approved dewatering operation to control/not allow any free phase oil from being discharged. Paul John also authorized use of local DEC Spill contractor for this emergency to dewater excavation. Luzon was on site today to vac off free phase oil from surface.

Dewatering/backfill operation continued for next 2 days. Backfill completed on 3/30/07 approx. 2:00 PM. Previously stockpiled soil was not entirely used to backfill excavation and will be properly covered. 4/23/07- Site inspection. Some 1 foot of standing water remins on floor of building from rrecent flooding. dt 5/4/07- Site inspection. No signs of standing water remaining on floor of building. dt 10/25/07- Precision Env. on site collecting more soil samples and installing small diameter MW's for groundwater collection. dt 1/30/09- Based Upon information in the December 2008 report (see E-docs) prepared by the DEC Standby Contractor, Precision Environmental Services, this Department is not requiring any further action at this time. DEC has completed enough work to eliminate any real threat to the nearby creek from the #6 oil contamination that has been identified. This petroleum spill incident is being closed as Does not meet standards. Due to the size of the onsite facility and past activities there, the extent of other environmental

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the

discharge does not adversely affect water quality.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo: "10/11/16 Spill called in early AM on 10/8. NYSP found a meth lab at

the Cadet Motel in Cornwall. They initially requested TriState Env to come and clean this up. Total contents were described by SP as fitting into 2-5 gal buckets. Spoke to Lisa at TriState, who said she had been informed by NYSDEC that they were not to do meth lab cleanups. Need to clarify this issue. Got back to SP, and informed them that TriState would not be cleaning this up. They decided to use

Environmental Interest/Information System:

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo: "7/12/18 Spoke to Smit Environmental. Pulled tank 1 (15,000 UST) and

found soil contamination. Believes it is related to spill# 1408540. Tanks 2 & 3 still to be pulled per consent order. ga 7/12/18 Site visit with MT. Smit was still working on removing tank 1. Tanks 2 and 3 are compartments in the same tank (10k and 15k, net 25k), which will be removed tomorrow (7/13). Thus far, contamination has only been identified where the borings had been done. Tank grave smelled of petroleum and contaminated soil could be visibly identified. There are currently two soil stockpiles - one on poly for contaminated soil and a larger pile right next to the tank grave for clean soil, not on poly. MT noted that there is some cross-contamination on the end of the clean soil pile closest to the garage, which was brought to the attention of Jason Smit. Photos to be added to D2. SRK 8/22/18 Site visit with Josh Cummins. Tanks appear to have been removed. Contaminated soil pile staged under plastic in parking lot - awaiting

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the

discharge does not adversely affect water quality.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking

environmental facility information found across the State.

Click this hyperlink while viewing on your computer to access

additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

 Updated By:
 AMOMOROG

Site Description: Location Description: The Majestic Weaving Site is located along the

eastern bank of Moodna Creek in the Town of Cornwall, Orange County.

Mill Street is immediately to the east of the site. Site Features:
This 70 acre site was formerly a textile mill, with the main building located in the southern half of the site, along with storage tanks, a drum staging area, and a fuel oil storage building. Two waste lagoons are located on the northern half of the site. The properties to the

Direction Distance Elevation

Site **EPA ID Number** Database(s)

D & W FURNITURE (Continued)

EDR ID Number

east and southeast of the site are residential. Current Zoning and Land Use: The site is currently being used for light industry and commercial warehousing, including the D&W Fine Furniture Company, by which the site is also known. Past Use of the Site: The former Majestic Weaving Corporation operation consisted of applying colors to textiles by printing and dyeing. The textiles were washed and finished after coloration. Site contamination resulted from improper storage and handling of wastes, including waste solvents, spent fuel, acetone, and metals. Two surface impoundments located on the bank of Moodna Creek were also used for waste/wastewater treatment. Site Geology and Hydrogeology: On-site soils consist mainly of a gravelly silt loam from two to fourteen feet below grade surface (bgs). A till layer exists below the soil ranging to depths of thirty one feet bgs. Bedrock on-site is a conglomerate made of siltstone and quartz. Groundwater flows to the west toward the Moodna Creek. Remediation at the site is complete. Prior to remediation, the

Env Problem:

Health Problem:

primary contaminants of concern were toluene, 1,1,1-trichloroethane, tetrachloroethene, xylene, trichlorobenzene, chlorobenzene, lead, magnesium, mercury, and zinc. Contaminants that remain above the residential soil cleanup objectives (RSCOs) in the on-site lagoons are as follows: -one detection of toluene at 140 mg/kg (RSCO of 100 mg/kg); -four detections of aldrin ranging from 0.021 mg/kg to 0.03 mg/kg (RSCO of 0.019 mg/kg); -three detections of endrin ranging from 3.7 mg/kg to 4.5 mg/kg (RSCO of 2.2 mg/kg); and -three detections of copper ranging from 357 mg/kg to 7920 mg/kg (RSCO of 270 mg/kg).

Remedial measures taken have removed contamination from the site, therefore exposures to site-contaminants are not expected.

DEC Memo: "1/15/12 Spoke to ECO Buckley, who was on the scene. Fire had been

ongoing since 10 AM this morning. FD on scene. Officer Buckley reports that he heard an explosion from inside the building. He also reports that there may be oil drums inside the building. Water being used by FD to put out fire may be running off into the Moodna creek , which is next to building, and may have petroleum or other chemicals in it. Contacted John O'Mara, who directed Keith Browne, the after-hours runner, to respond to the site. I relayed this directive to Mr. Browne, who would be contacting O'Mara for further instructions. dw 1/15/12 - At 5:00 pm the fire was still fully

involved. The assessment of environmental impacts of fire water deem secondary seem large quantities of water was still needed to fight the fire. KAB 1/17/12 - The fire department is still addressing hot spots. An environmental assessment will be could once active fire fighting activities have eneded. KAB 8/13/15 DEC's involvement has

ended. JO'M"

Remarks: "1559 ECO BUCKLEY ADVISED A LARGE FIRE. THE CAUSE IS UNKNOWN. SEVERAL

ABANDON DRUMS MAY HAVE CAUSED THE FIRE. ECO BUCKLEY IS REQUESTING

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SUPERFUND (NON-NPL)

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State. ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include: Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo: "ATS to recommend tank removeal depending on results. Potential buyer

hired ATS. \\ 6/21/10 Needs to be investigated JO'M 3/29/12 Owner filing for bankruptcy. UST removal and soil excavation were done by Castlton. UST was taken away. Spoke with both owner, Ms. Maestre, and Bill Jacobsen from Castlton. Castlton removed approx. 150 tons of dirt, which he estimates to be around 8 truckloads. Soil has been left on site. Wehrfritz in her notes states that Castlton took post-ex samples, and they are clean, but will not be released due to non-payment, Maestre's attorney is Lawrence Klein, at 845-565-2100. dw 4/2/12 Contacted attorney, Mr. Klein, who will look into the matter. dw 3/29/13 Left message with attorney regarding any update. Spoke to Ms. Maestre, who said that there has been no change. Soil pile is still on site. May need RP letter. House is in foreclosure. dw 4/1/13 Left voice mail message with Maestre regarding possible bank ownership, since the house is in foreclosure, according to her. May need site visit to check on soil pile. dw 9/19/13 Visited site. Met with Alexander Maestre, who explained that they are in a bankruptcy procedure with the bank, which should be settled soon. Soil pile is next to house, and is completely overgrown, except for the parts that were still covered. It appears to be one large dumpster load in quantity (6' x 10' x 10'). Homeowner wants to get rid of soil pile, but does not have the financial resources. Will contact DEC with any status changes. dw 12/21/15 Called and spoke to attorney's secretary, who will relay a message concerning any update to site. dw 12/23/2015 -- Regional spills staff have reviewed the limited available information for this spill and placed it into an INACTIVE category as noted by the place holder project manager Jen Cutter. ELM/DB 07/19/2016 Changed project manager from J. Cutter to D. Weitz to respond to FOIL request---BHY 7/21/16 Spoke to rep for the bank. He is going to pay Castleton so he can get the receipts for the soil and the post ex-samples for closure...mm 8/30/16 Castlton has submitted a closure report which will be reviewed and filed in decdocs. 95.4 tons of dirt were removed. Original post-ex sample results were lost (from 2008) so soil borings were done in the former location of the UST bottom. These samples were all cp-51 compliant,

Remarks: "FOUND CONTAMIANETD SOIL AT ABOVE ADDRESS DURING SOIL TESTING"

DEC Memo: "8/31/11 Spoke to Mr. Bedetti, the FC. Left message with owner's son

at 845-541-2309, and waiting for callback. Bedetti says there is oil floaring around on water in the basement of this house. Will try to do site inspection tomorrow. dw 9/6/11 D. Weitz did site inspection.

EDR ID Number

House has been flooded out, and according to Officer Bedetti, the house has been condemned due to structural damage. On the right-hand side of house, through what remains of the basement steps, I observed a pool of #2 fuel oil. Conklin has been instructed to do a basement pump out, using the county-wide pin # for hurricane Irene. dw 9/7/11 spoke to Mike from Conklin. Pump out has been ongoing. A second pump out will be needed, and has been approved. Nobody to actually enter the building as a precaution. dw 9/14/11 left another message with owner's son. dw sp# 1106442 and pin# 05566 10/19/11 inquired at Town of New Windsor Assessor's office for a mailing address for Mr. Laddick. It is 45 Forge Hill Rd., New Windsor, NY 12553 dw 1/13/12-Stopped at residence and spoke to Frances Laddick, owner,

845-534-4967. They returned to residence weeks ago. She reports they have not experienced any oil odors or seen any residual oil impacts

in basement. NFA DT '

Remarks: "100 gallon spill is in the basement. **Update** Spill was due to

flooding, the basement filled with water knocking over the tank. The

basement is now filled with water and the oil is on top of it.

Requesting to talk to a Spill Responder."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

DEC Memo: "12/28/18 Bottini made delivery. Driver said he was listening to

whistle, automatic shut off kicked in at 275 gallons. Driver went to check it out, not expecting tank to take that much. Found the plug at the top of the tank had been removed, approx. 200 gallons of oil had spilled to basement. Unable to see type of floor or if any drains due to oil. Service tech on route. Spoke to school superintendent. Building is from 1920's, used for Administration. Unsure of type of floor in basement or if any drains. Tank is 300 gallon AST. Building is evacuated, no kids on campus at this time. School will be switching to gas next month. ga 12-28-18 M. Tipple to visit the site today. BTR 12/31/18 Site visit update. The bung had been removed from the 275 gal AST prior to delivery. There had been issues in the past because the fill is 2' and the vent is 3/4 inch. In the past, the delivery person has contacted the maintenance staff and the two people conducted safe deliveries to this tank. There was an oil delivery person who had never delivered to this tank and apparently did not either have delivery notes indicating the issued associated with this tank or did he go into the basement and check the tank and

gauge to verify the situation. The delivery person overfilled the

EDR ID Number

N/A

Direction Distance

NY MILITARY ACADEMY (Continued)

S123659719

tank and dropped 40-50 gallons of fuel oil onto the concrete basement floor. The integrity of the concrete floor is questionable and must be cleaned in order to determine if there are cracks and voids where the oil may have gone. At the time of delivery, there was a gas boiler located in the basement and the conversion was scheduled for the New Year. Bottini - Bob Juliano was on site assisting the NYMA maintenance staff with the initial cleanup. mt 1/2/19 Upon review of photos taken during the spill response, the Tank gauge indicated the tank was empty when the petroleum in the tank was to the top of the open bung. Photos in D2. mt 1/17/19 Surficial cleanup completed, abandon sump in boiler room impacted. Roof work had removed gutters. Rainstorms reveal additional contamination. Invesigation to continue. mt 2/14/19 cleanup may be completed, sample data pending. mt 10/23/19

Cleanup completed, report in D2. NFA mt"

Remarks: "plug was removed from top of the tank causing loss during fill. Tank

is in the basement"

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the

discharge does not adversely affect water quality.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking

environmental facility information found across the State.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance

Direction Distance

EDR ID Number Elevation Site Database(s) **EPA ID Number**

CORNWALL (T) WWTP (Continued)

1016445079

information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "6/12/13 Tyree pulling tanks today. Trying to finish work by this

evening, ahead of another rainfall event tomorrow, referred to Tipple for followup. dw 6/27/13 Tipple conducted a site visit upon the request of the New Windsor Fire Inspector Francis Bedetti. Tyree (Harry Sudwischer 508-962-1174) has subbed the work to Paragon Env. Contact: David Robins 315-559-9845cell, 315-699-0840 office The tank was pulled on 6-13-13, there is a covered stockpile of soil on the site. Three micro-wells were observed to have no visual or olfactory presence of petroleum odors (the wells were very silted) .Called Tyree, they plan to remove the stockpile and prepare a tank closure report shortly, mt 07-11-13 visited site, soil pile not properly covered and no hay bales to prevent runoff from entering nearby swale, emailed Tyree and requested it be addressed. RDB 9/12/13 Tank closure report submitted and reviewed. The spill will remain open as the SCO's for both soil and groundwater have exceedances. A remedial work plan is required to addres the remaining contamination. Additionally, the PBS registration must be updated to reflect the changes. mt 5-29-14 both new and old owner excavated additional soils in Spring of 2014, report submitted yesterday, need to install new wells and determine gw quality RDB 10/3/13 Tyree has been notified that the proposed investigation plan is approved.mt 02-28-13 report submitted 03-03-14 letter sent to Getty 03-17-14 need to coordinate with Spill 13-11191 RDB 04-04-14 Soil inside shoring box removed down to 13 ft, soil around box, (along rt 94, old forge and near dispenser island) removed RDB 5/29/14 Spill # 1311191 closed and referred to Spill # 1302716, contamination source same, will be handled under this #. mt 03-15 report submitted 3quarter 2014 RDB 6-10-15 met with Antea & Getty; looking for closure NFA RDB 5-26-16, Please let this serve as notification that Antea Group, on behalf of Getty, will move forward with abandoning the wells associated with this site. The work is schedule to be performed on Tuesday, May 31, 2016. RDB 6-6-16

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

15 gals. Rain from today has it pooling in a puddle. HazMat tested the material but the black staining is making it impossible to use color ID. VOCs are detected but a sheen is not present. Moodna creek nearby but not impacted. Matt Ramsey, owner of Affordable Auto Sales was moving a plastic drum of what he was told was washer fluid from a previous lessee. He was lifting it into a dumpster at the property when the drum popped and spilled the contents which did not appear to be washer fluid. Spoke to landlord, Steve (914 805 7696) and he says that he can hire a contractor. I asked that he call me back to confirm this and give me an ETA of contractor. -MS 6/29/20- No update from Steve. Unregistered waste oil tanks at different locations on this property which has already been inspected. Still an issue of Steve (landlord) not disposing of materials properly and not confirming cleanup of the spill. DW says that M Stati from Optima updated him that they will be responding. -MS"

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DEC Memo: "6-20-13: V.Mc. call to JASON SMIT/Smit Enviro.: Property for sale,

buyer found old records indication that property may have been a gas station at one time, it's now a strip mall. Exc. ongoing, two 4K USTs found so far and more may be encounted as exc. cont. USTs have many holes, and groundwater is shollow, about 3ft below grade. 6-20-13: V.Mc.: e-Mail from Ed Moore: I swapped emails with him earlier today. Assign spill to Michelle. With contamination present: the tanks are/were subject to PBS despite being abandoned prior to mid-80s. I will handle the referral. 7/29/2013 -- Spoke to Jim Petro, owner. Had received copy of a fax last Friday of a PBS registration package. With the copy was a \$500 check. If these tanks were properly closed before the regulations and they had caused no enviro impact, they would be exempt from PBS. This spill was reported due to holes in the tank(s), not because of observed contamination. Owner was told by Smit that they found no contamination. I confirmed this with Smit. If

and when the TCR is submitted confirming there was NO CONTAMINATION, we can close the spill and the tanks would be exempt from PBS (no fees). If there had been contamination, the tanks would have been

subject to PBS. ELM 7/30/2013 -- Smit emailed the tank closure report. No contamination. Tanks were abandoned over 30 years ago; now excavated w/o contamination. Therefore, the tanks are exempt from PBS

per CFR 280 regs. Tank had rust holes, but nothing leaked. NFA meets

stds. ELM"

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Spiller Company: 999

Contact Name: SCOTT SPAGNOLIA

DEC Memo: "7/17/13 - During an excavation an abandon tank was discovered. The

tank was cut open and filled with sand. But there was still petroleum impacted soils in and around the tank. Caller will return after get the proper equipment to excavte the soil. And hire a company to collect post ex samples. KAB 7/25/13- spoke to Scott of Spagnolia Excavating. He reports that Smit Env. Svces. conducted site

assessment for tank removal and collected samples. DT Received postex soil sample results. VOC's non-detect; SVOC's had several compounds that exceeded cleanup guidance levels. 8/15/13- Conducted site inspection. Area of excavation was limited to approx. size of tank removed. Location will allow removal of additional impacted soils. DT 8/20/13- Notified Smit Env. by email that more soil excavation is required. DT FD is contacting their Ins. Co. for coverage. 8/14/14-Spoke to Steve Bedetti of FD. More soil was excavated by a different

excavator during site drainage work. No postex soil samples collected. Advised FD that postex soil samples were needed and soil disposal documents. DT Received TCR from Smit Env. Services. Area reexcavated to remove more impacted soils and then resampled. Some SVOC's slightly over guidance values. Area serviced by municipal

water. Some 115 tons of impacted soils excavated and disposed. NFA DT"

Not reported

Remarks: "Caller advised during excavating caller could smell an unknown type

of petroleum and found contamination in the soil from a historical spill from an old tank that looks like was just filled with sand."

before agree to any price. The test pits had highly contaminated soil with reading of 900 ppm on a PID. The Caller estimated at least 350 tons need to be remove from the site. The Caller describe the soil wet with petroleum. 3/19/18 met with IPT during soil excavation, impacted soils are being live loaded into tractor trailers (disposal at ESMI). Groundwater in the location of the former tanks is at approximately 8 feet below grade and bedrock is approximately 10 feet below grade. Soil and groundwater in former tank field has appearance and odor of heavy petroleum impact. IPT states that 4 trucks are being loaded today and 3-4 are scheduled for tomorrow (3/20/18). IPT indicated that the north and east walls did not seem bad, IPT was informed that all soil and groundwater exhibiting petroleum impacts is to be removed. pictures loaded into D2. BW 4/12/18 no on site activity, soil pile has been removed, and the area has been partially backfilled. Pictures in D2. Will follow up with an email to IPT for site status update. BW 4/20/18 email from KB to IPT The 20K UST and soil removal workplan was approved on Monday. What is the status of the approve work? And what are the schedule field days? BW 4/23/18 site visit, no personnel on-site. Site in similar condition as it was during 4/12/18 site visit. BW 5/8/18, Island Pump & Tank started to uncover the 20K UST. The excavator arrival at the site about noon, so there was only a half day work perform. The schedule work is to uncover the tank. The tank is almost filled with concrete. It is assume that a quikrete was use to fill the tank, which is a more brittle concrete. The propose work for 5/9/18 is to pump out the water in the tank. It is approximated that 15 gallons of water with slight petroleum odor. Use the excavator to peel the tank top and start breaking up the concrete. KMB 5/9/18, Island Pump & Tank peeled open the tank and removed the material inside. The quikcrete was easily broken to its granular form and volleyball size chucks. The material that has a PID reading of 125 ppm, even though there was not a strong petroleum odor. Jackie Trosclair collected a sample for analysis. Dr. Javaid asked if he could reuse the material on site. I told him no, the material must be properly disposed. The excavation and tank removal will most likely be completed by Friday, 5/11/18. KMB 5/24/18 site visit, contaminated soil stockpiled on-site, location of former tank still open, no excavator on the property. Pictures in D2. BW 6/29/18 met with IPT on-site. They are loading out 6 trucks (3 trucks for 2 turns) of soil today going to clean earth in NJ. The remaining loadout of soil (about 200 tons or 8-9 trucks) is to be completed on Monday 7/2/18. Pictures in D2. BW 7/6/18 tank excavation report received from IPT. BW 9/25/18 email received from IPT including a figure with sampling locations. BW 9/27/18 inform PES after internal discussions their mob date of 10/4/18 is currently on hold but not canceled, please see the bullet points below. " Dr. Javaid did not agree to complete the work of your approved workplan therefor we will reach out to Dr. Javaid s lawyer, Meave Tooher, and give them until tomorrow (9/28/18) to comply with the workplan. " If Dr. Javaid agrees to do the work under the approved workplan we will hold Precision s mobilization until 10/11/18 to see if the work is started by 10/4/18. If the work is not started on 10/4/18 we will mob Precision on the later date. " If Dr. Javaid does not agree to the approved workplan then we will mob Precision to the site as scheduled. BW 10/2/18 inform PES that Dr. J did not respond by the due date and that the Department is planning on moving forward with remedial efforts. BW 10/4/18 - Precision Environmental Services was on scene with a geologist, operator and Geoprobe unit to conduct the

DB MART RETAIL GAS (Continued)

S121464403

offsite investigation. The approved workplan called for the soil and groundwater investigation of three properties: 372 Hudson St., 21 First St. and 15 First St. The DEC did not receive right of entry for 21 First St. but the property was not necessary to determine offsite impacts from the gas station. One soil boring was placed in the front yard of 372 Hudson St. Refusal was encounter about 12 ft. there was no water. The PID reading was zero and the soil boring was filled back with the soil cuttings. Four soil borings were placed on 15 First St. three were converter to groundwater monitoring points. One of the soil borings had PID reading of 500 ppm. Three soil borings samples were collected and three groundwater samples were collected for laboratory analysis. Another groundwater sample will be collected in about two weeks. The RP has been illegal discharging water that has been collecting in the excavation of the former 20K UST location. The RP was told by the DEC to stop discharging water. The RP was told to have his environmental contractor collect water and soil samples and to proper pump and discharge the water to a proper facility. KAB " Not reported

DEC Memo: "9/26/19 Ben Maggio, Code Enforcement for Village of Cornwall,

reported by email electronic monitor in alarm on 9/5/19. He sent a video in response to request for more information in relation to what he discovered. Video shows what appears to be a Veeder Root 3xx series electronic monitor with L 7:Fuel Alarm indicated on the display and the alarm light blinking. Ben does identify the unit as a Veeder Root 350 in an email also. Earlier in the day, Ben had reported that the new tanks, that have not been registered yet, had received a delivery of 5000 gal of regular, 1000 gal of super and 1000 gal of diesel. Included was a picture showing a delivery truck hooked up to 2 tanks and driver standing in front of rack. Delivery company appears to be All Aboard. Given report of fuel in tanks, L typically being a leak detection system designation and lack of response from facility explaining alarm, facility was directed to

report as a spill. To date they have not reported. jc"

Remarks: "Spill entered based on contact from Ben Maggio, Code Enforcement for

Village of Cornwall, report of electronic monitor alarm."

DEC Memo:

"9-7-17 PBS inspection performed today. -Product found in both tank spill buckets. Operator believes last delivery was 2 days ago. Dutchess Terminals is supplier. Buckets cleaned up during inspection. -Also popped a monitoring well about 8' from super (tank 3) fill. Water visible down pvc riser. Sheen noted. Notified Gerry Pratt. -Possible issue...Section of super product line is double walled flex. The section would appear to be between disp 1/2 and tank. Flex is visible at disp, but not visible at tank sump. Unknown what issue caused need to replace a section of line or if the section taken out of service was properly closed. Facility scheduled to meet w/DEC staff on Oct 10, 2017. jc 9-11-17 NOV to be hand delivered today along with a Department Notice of Intent to red tag systems if facility does not agree to cease deliveries to tanks until such time as tanks are compliant. jc 9-15-17 DEC met with Ayub Javaid. John Urda, Ed Moore, Josh Cummins, G Pratt. He has complied with DEC request to stop getting deliveries, confirmed by daily DEC checks. Explained to him that he must hire a contractor and sign a STIP agreement, provided to him by J Urda. Explained what the STIP meant and asked him to sign and return by Wednesday. Asked that he hire a contractor within 2 weeks. He has called 1 possibly 2 contractors to date but nothing firm. GHP 9-18-17 K Browne checked tanks, reg ~2 in. super ~5 in. He met with Jaweed but did not have any further info on meeting action items from 9-15. GHP 9-19-17 Spoke with Ayuba Javaid, he states exactly what he said on Friday. He is attempting to contact Island and Francis Smith and Sons. Both of which have not returned his calls. He requests the DEC go after the previous RPs for the earlier spills. He has not signed the STIP and will be away for the next few days to meet with someone in Portsmouth regarding the site but I couldn't get the name due to language barriers. He promised to get it signed and either stop by the office or mail it on Friday. I reiterated the need for the STIP, an attorney and a contractor ASAP and that if he couldn t or wouldn t do the cleanup then DEC would. I stated we could take the tanks out and all the contamination and the pump island. GHP 10/16/2017 -- RAWP was submitted by WCC Tank (Lou Mastro) on Friday, 10/13. Approved and D2 on the 16th with email setting deadlines of excavation of all known USTs by Friday, 10/27 and PBS application by the following Friday. ELM 3/19/18 met with IPT during soil excavation, impacted soils are being live loaded into tractor trailers (disposal at ESMI). Groundwater in the location of the former tanks is at approximately 8 feet below grade and bedrock is approximately 10 feet below grade. Soil and groundwater in former tank field has appearance and odor of heavy petroleum impact. IPT states that 4 trucks are being loaded today and 3-4 are scheduled for tomorrow (3/20/18). IPT indicated that the north and east walls did not seem bad, IPT was informed that all soil and groundwater exhibiting petroleum impacts is to be removed. pictures loaded into D2. BW 4/12/18 no on site activity, soil pile has been removed, and the area has been partially backfilled. Pictures in D2. Will follow up with an email to IPT for site status update. BW 5/8/18, Island Pump & Tank started to uncover the 20K UST. The excavator arrival at the site about noon, so there was only a half day work perform. The

The quikcrete was easily broken to its granular form and volleyball size chucks. The material that has a PID reading of 125 ppm, even though there was not a strong petroleum odor. Jackie Trosclair collected a sample for analysis. Dr. Javaid asked if he could reuse the material on site. I told him no, the material must be properly disposed. The excavation and tank removal will most likely be completed by Friday, 5/11/18. KMB 5/24/18 site visit, contaminated soil stockpiled on-site, location of former tank still open, no excavator on the property. Pictures in D2. BW 6/29/18 met with IPT on-site. They are loading out 6 trucks (3 trucks for 2 turns) of soil today going to clean earth in NJ. The remaining loadout of soil (about 200 tons or 8-9 trucks) is to be completed on Monday 7/2/18. Pictures in D2. BW 9/12/18 IPT submitted investigation workplan. BW 9/14/18 subsurface investigation report submitted by PES, includes six borings on three properties. BW 9/18/18 - Meeting with Precision discussing plans for well placement and permission to go on three properties. BW 10/4/18 -Precision Environmental Services was on scene with a geologist, operator and Geoprobe unit to conduct the offsite investigation. The approved workplan called for the soil and groundwater investigation of three properties: 372 Hudson St., 21 First St. and 15 First St. The DEC did not receive right of entry for 21 First St. but the property was not necessary to determine offsite impacts from the gas station. One soil boring was placed in the front yard of 372 Hudson St. Refusal was encounter about 12 ft. there was no water. The PID reading was zero and the soil boring was filled back with the soil cuttings. Four soil borings were placed on 15 First St. three were converter to groundwater monitoring points. One of the soil borings had PID reading of 500 ppm. Three soil borings samples were collected and three groundwater samples were collected for laboratory analysis. Another groundwater sample will be collected in about two weeks. The RP has been illegal discharging water that has been collecting in the excavation of the former 20K UST location. The RP was told by the DEC to stop discharging water. The RP was told to have his environmental contractor collect water and soil samples and to proper pump and discharge the water to a proper facility. KAB 10/19/18 -Island Pump & Tank was on site with an excavator. The 20K UST grave was expanded slightly, there is still petroleum impacted soils about 6 ft. down. The station septic line was broken so excavation in the area was stopped. The next area to investigate was the area of the former gasoline USTs. The excavation went deeper than previous excavations about 10 ft. down. Visible contamination was not encountered. No PID readings. About 9 ft. highly fractured shale was encountered. The excavation had little water on the bottom and a sample was collected for laboratory analysis. The excavation was then backfilled. A water sample was collected from the frac tank. KAB 10/28/18 - An inspection was conduct to investigate the incident that someone discharged liquid from the frac tank back into the excavation. An Island Pump & Tank staff observed someone on site rolling up a hose from the frac tank and some of the valves and bolts were loosened. The frac tank had 32 inches of liquid on Friday. Today the level was 24 inches. It

Direction Distance

EDR ID Number Elevation Site Database(s) **EPA ID Number**

DB MINIMART (Continued)

U000380004

s estimated that 900 gallons was removes from the tank. Island pumped the excavation again into the frac tank. The level was little over 32 inches. All valves and bolts were tighten on the frac tank by a hand wrench. The excavation will be backfilled today and tomorrow. Island needs to remove and properly disposed the liquid in the frac tank and the contaminated soil under plastic sheets. KAB 12/10/18 SIR submitted by PES, report in D2. BW 4/30/19 - The DB Mart retaining wall that border 15 1st St. has collapse. The concrete blocks have fallen in the backyard of 15 1st St. An assessment by DEC and Precision (NYSDEC consultant) will conduct to determine if excavation of the contaminated area can be done safely. KAB "

covering all the tanks. Boom has been placed leaving the primary

Map ID MAP FINDINGS
Direction

Distance EDR ID Number Elevation Site EDR ID Number Database(s) EPA ID Number

SEWER PLANT (Continued)

S125868573

tanks, but they do not believe it is catching all the product. From the plant the water enters the Moodna Creek and then the Hudson River. ga 1/27/2020 Product is red in color, and has been traced to one of three main lines. DPW personnel has been popping manholes to trace the flow from the smaller branch lines, but the spill has been dissipating quickly into the main line. Boom and pads have been put out on lines to try to slow / halt the flow. Supervisor has sent out officers to try to trace contamination. Spill has reached from the primary tanks to the secondary clarifiers. ga MS and JC enroute. dw 1/27/20- Response follow-up: The DEC retained APECCO to recover the fuel as described. JC & MS arrive at the site and plant supervisor, John Egitto, shows us the 3 primary settling tanks which, earlier in the day, had been completely covered with red fuel. John showed us the 3 pipes that make up the input for the plant. He says the 30 pipe comes mainly from the Stewart Airport/Rte 207 area. This is the drain that the fuel was flowing from. They noticed the fuel after their lunch. John sent out plant workers to start opening up manhole covers to trace the product up the drain. They got to the top of the hill on Caesars Lane before they weren't seeing product in the drain anymore. Addition of product to the input stopped shortly after that. inflow of fuel may have lasted 30 minutes at most. These inputs go through a screen into a grit removal tank, then to the primary settling tanks, ~10' deep. Grease and grit are pushed into hopper pits ~10' deep where sediments are cycled back through the grit removal. The Settling tanks had some sheen and a small amount of recoverable emulsified oil floating along the arm that pushes sediment and oil into the hopper pit. The water in the settling tanks moved to trickling filter tanks, then to secondary settling tanks which had a very small amount of sheen on one. John said that the fuel had already reached these and they were turned off to prevent further movement of the fuel and damage to the filters. He said that the water in the secondary settling tanks was uncharacteristically murky, perhaps due to the contamination or the filters not being turned on. APECCO arrived with a vac truck and were instructed to recover the product in the primary settling tanks. The arms to catch sediment/oil were turned off and the recoverable material was vac'd out. When the settling tanks were turned back on, more emulsified fuel entered the tanks and some fuel was visible at the edges of a hopper pit. These materials were vac'd but a thick scum of grease prevents recovery of fuel from within the hopper pits. Plant workers say they call on T.A.M. to dispose of the fat/oil/grease scum and may be able to recover this product, as well. The tanks will need to be run to see how much more fuel is going to cycle through. APECCO was then dismissed from the site. JC & MS go to the facility's outfall, which is at the end of a submerged pipe in the Moodna Creek where it meets the Newburgh Bay/Hudson River. The discharge is not visible. No fuel visible here. DEC Water engineer, Manju Cherian, has been informed of the status of the spill. -MS 5/6/20 ISR on Dan's desk for signature.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Retest of 10k tank done on 6/7/06 also FAILED. Faxed results sent in by IDC today. Tank being removed per D. Traver---BHY 9/6/06- Site inspection. Both 10K tanks removed yesterday by American Petro. and still on site. Both tanks had visible holes (several Pencil size). Black product on water under Tank#1. Excavation being vacced out. Soils are clay within excavation and heavy impacts noted adjacent to Tank #1 area. Gross impacted soils to be excavated. Rec. Sump well to be installed within excavation to facilitate further recovery of product. Removed tanks were 10ft. in diameter. No product noted inside bldg. in floor drain. SEE SPILL NO. 0601789. DEC Memo: "05/22/06: MINIMAL SHEEN ON PUDDLE. MAY BE FROM RUNOFF - HE WILL

CHECK ALL HOSPITAL SYSTEMS TO MAKE SURE IT IS NOT THEM; PAOBABLY LESS

THEN 1 PINT TOTAL THEY WILL MONITOR AND GET BACK TO US IF IT GETS

WORSE. See also Spill No. 0602347- TTF. 6/6/06- Site inspection. Met with IDC & Sons on site and Mike Pascale and Dennis Genoski of Cornwall Hospital on site. IDC & Sons on site cleaning up free product discharging from storm sewer system onto front lawn. Inspection revealed that fuel oil has been entering storm sewer system discharging to temp. a/g stormwater containment ponds and discharging across front lawn. Oil impacts (dead grass, oil impacted soils) noted. IDC directed to construct siphon dam at storm sewer outlet prior to stormwater ponds and to deploy sorbants. Retest of failed 10K fuel oil tank (0602347) scheduled for tomorrow.

Reportedly, tank has been emptied and is inactive since TT failure last week. Noted temp. piezometers near the 2-10K tanks and near 5K diesel tank for standby generator. Piezometer near 5K diesel tank exhibited strong petroleum odors and whenn checked for free product with bailer had film of free product. Directed hospital to empty tank immediately, arrange for temp. tank and begin cleanup in this area. 6/7/06- Notified by phone that Tank #1 (10K fuel oil) failed

tightness test today- lines passed. Site inspection later in day with IDC and hospital- Mike Pascale, Robert Ross. Noted more free product continuing to discharge from storm sewer- siphon dam and sorbants in place. Directed hospital to continue 24 hour cleanup/containment during current heavy rains. Directed hospital to commence immediate removal of failed 10K tank in order to investigate and cleanup source of oil entering storm sewers. Hospital requesting quotes from IDC for tank replacements. 6/9/06- Notified by M. Pascale of St. Luke's that temp. tanks being set up for all 3 u/g tanks. May take up to 6 weeks to replace tanks (tanks need to be ordered). Also, hospital needs to get estimates for tank replacements. 6/14/06- Site inspection. R. Amato earlier in Cormwall for Spill No. 0602841, oil in Canterbury Creek. R. Amato met with IDC & Sons and traced oil from creek back to

hospital property in storm drains. IDC & Sons placed additional sorbants in creek and strom drains leading to creek. I was notified of some reports of oil odors inside hospital basement and notifed OCDOH and NYSDOH. NYSDOH, Carl Obermeyer, met me on site. Noted oil odors in Women's Rest Room/Break Room next to pharmacy. Odors originating from basement below and following trech for internal piping. Sub-basement area had a sump pit with oil intrusion and heavy oil odors. DEC/DOH instructed hospital to cordone off this area with plastic and to ventilate to outside to reduce odors here and in Wommen's area. Later identified oil in floor drain at bottom of stairwell outside of boiler room. These drains are also interconnected with roof drains. 5K u/g tank for generator was removed today. No water encountered in excavation. Only pockets of contam. soil noted along East and North walls- numerous u/g utilities in this area prevented excavation activity. One small pion hole reported to be present in tank. Soil conditions were clay like and concrete pad was present under tank. IDC & Sons to continue to

investigate source of oil entering storm drains on property and floor drains inside hospital. Mike Pascale of St. Luke's also on site.

S106002996

6/15/06- Notified by IDC & SONS that oil was found around generator. K. Browne and DOH to inspect later today. 6/20/06- Site inspection with IDC & Sons and Dennis of St. Luke's. Inspected impacted storm sewer system on and off site and discharge point in Canterbury Creek. No visible sheen and only trace of odors in storm sewer and outfall at creek. Noted minor accum. of product at siphon dam. Area experienced heavy thunderstroms in previous 24 hour period. Inspected inside hospital basement and sub-basement. Vent fans in place and operating in sump pit in sub-basement. No petroleum odors detected in Women's Rest area above sub-basement. Inspected floor drain inside stairwell- minor film of product inside florr drain- no petroleum odors detected inside stairwell. Discussed all investigation work to date by IDC & Sons. Investigation to date inconclusive regarding identification and pathway of source of oil. All sources, 3 u/g tanks and generator day tank, have been emptied or repaired. U/G tanks scheduled for replacement- temp. tanks in place. Directed hospital and IDC to monitor storm sewer and discharge points at this time and maintain sorbants as necessary. 7/17/06- Site inspection with M. Pascale, Dennis G. and american Petroleum. American Petroleum now on job for tank replacement and oil cleanup. Discussed past work and need for additional sorbant maintenance and monitoring. 9/6/06- See Spill No. 0602347. 9/20/06- Fuel oil tank excavation cleaned out to set new tanks. Some water in bottom of excavation with no free product noted, minor sheen. Sidewalls demonstrate clay like soils. Am erican Petroleum taking postex samples. American Petroleum to install 4 tank pad wells just off corners of existing tank pad when new tanks installed. Discussed with Dennis of hospital need to maintain siphon dam at outlet of storm sewer pipe when stormwater retention ponds are eliminated and subsurface infiltration gallery is connected. 10/3/06-Contacted by general contractor on site and American Petroleum that during dismantling of stormwater retention pond this week, heavy petroleum odors and heavy oil sheen coming off of soils around inside perimeter of pond. This contamination was a result of original spill into pond when IDC & Sons intiaaly responded to cleanup. Discussed and verbally approved proposal from American Petroleum to dewater pond to frac tank, divert any new water from pond coming from storm sewer and to excavate and dispose of oil impacted soils. 10/5/06-Spoke to Dennis G. of Hospital by phone. Dennis states American Petroleum has frac tank on site and has dewatered pond. Impacted soils being scraped from now dewatered pond area. Advised Dennis that previously oil impacted areas beyond pond area need to also be checked for oil impacts now. CLEANUP/TCR REPORT DATED 8/29/07 RECEIVED FROM APECCO. NFA DT'

Waste Code: D008
Waste Description: LEAD

Waste Code: D009
Waste Description: MERCURY

Waste Code: D018
Waste Description: BENZENE

Waste Code: F003

Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL

ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL

ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL

BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT

MIXTURES.

Waste Code: P001

Waste Description: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS,

WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3% (OR) WARFARIN, &

SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

Waste Code: P042

Waste Description: 1,2-BENZENEDIOL, 4-[1-HYDROXY-2-(METHYLAMINO)ETHYL]-, (R)- (OR)

EPINEPHRINE

Waste Code: P075

Waste Description: NICOTINE, & SALTS (OR) PYRIDINE, 3-(1-METHYL-2-PYRROLIDINYL)-,(S)-, &

SALTS

Waste Code: P081

Waste Description: 1,2,3-PROPANETRIOL, TRINITRATE (R) (OR) NITROGLYCERINE (R)

Waste Code: U010

Waste Description: AZIRINO [2',3':3,4]PYRROLO[1,2-A]INDOLE-4,7-DIONE,

6-AMINO-8-[[(AMINOCARBONYL)OXY]METHYL]-1,1A,2,8,8A,8B-HEXAHYDRO-8A-MET

HOXY-5-METHYL-, [1AS-(1AALPHA, 8BETA, 8AALPHA, 8BALPHA)]- (OR)

MITOMYCIN C

Waste Code: U058

Waste Description: 2H-1,3,2-OXAZAPHOSPHORIN-2-AMINE, N,N-BIS(2-CHLOROETHYL)TETRAHYDRO-,

2-OXIDE (OR) CYCLOPHOSPHAMIDE

Waste Code: U059

Waste Description: 5,12-NAPHTHACENEDIONE,

8-ACETYL-10-[(3-AMINO-2,3,6-TRIDEOXY)-ALPHA-L-LYXO-HEXOPYRANOSYL)OXY]-

7,8,9,10-TETRAHYDRO-6,8,11-TRIHYDROXY-1-METHOXY-, (8S-CIS)- (OR)

DAUNOMYCIN

Waste Code: U237

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:

"11/18/19 J. Giordano on site - spill being addressed. ga 11/18/19 JG site visit. On-site to observe tank pull. Contractor is Titan Excavating (Chuck Quadlin & crew). Environmenntal consultant is DT Consuting (Oliver). While on site, I observed a loss of gasoline from the product line as tank #4 was being pulled. About a gallon or two of product hit the standing groundwater in the tank excavation. Titan crew applied sorbent pads and the excavation was subsequently vacuumed out by Optima. The product came into contact with the pea stone at the edges of the excavation. I instructed Ollie and Debbie from DT Consulting that a spill should be reported for this impact within the tank excavation. When I left the site, there was still a lot of stone in the excavation and the underlying soil/bedrock was not exposed. JG 11/20/19 Email from Deb Thompson: Once the tanks were extracted we encountered pea stone (which I am told you saw), underlain by shale bedrock. The entire excavation is like a bathtub, shale underlayment w/ pea stone fill. Groundwater (perched) has been encountered above the bedrock aguitard. To date, approximately 10,000 gallons of captured groundwater has been extracted from the excavation. The problem I am seeing here is there is no source material to dig, subsurface materials are all bedrock (see attached picture). We collected a composite wall sample of crushed rock with minimal soil for analysis (quick 24-hr TAT) and will be delivered to the laboratory today. Once you excavate into the wall less than 1-ft. the shale becomes more competent and is not removable with an excavator bucket. My suggestion is to perform a groundwater study as an alternate to soil sampling as there is none. Followed up with Deb by phone. She will arrange to have the excavation dewatered and stone removed so DEC can observe conditions of excavation bottom. Will begin planning for subsurface investigation to characterize groundwater impacts. JG 11/26/19 Received lab report on single composite soil sample taken from tank excavation sidewall. Sample exhibited slightly elevated BTEX compounds. Highest detected constituent was total xylene at 1.6ppm. Based on my field observations from 11/18, its likely that the sample consists primarily of weathered rock with little organic fraction. JG 11/29 STIP sent to site owner BPTM Realty, LLC. JG 12/3/19 Signed STIP received. JG 1/2/20 JG Site visit. Met Deb Thompson on-site. Water from 2 x 20,000 frac tanks has been treated on-site and discharged to the storm sewer. The tank excavation has been dewatered for a second time and Titan was placing deadmen anchors to prepare for tank installation tomorrow. Approx 500 tons impacted soil, rock and debris has been removed from the tank excavation and disposed at Albany and Colonie landfills. Photos to be added to D2. JG 1/30/20 Received update from D. Thompson. Total of 540 tons impacted soil from the tank excavation was disposed at C/Albany landfill. All captured groundwater from the excavation has been treated and discharged in accordance with the STIP. Total discharged amount exceeded 100,000-gallons. The new tanks have been set and anchored and Titan is working on the tank tops. JG 1/31/20 JG site visit. Tanks were backfilled with fresh pea gravel. Excavation of dispenser island has begun. Contractor is also working on the tank top sumps today. JG 2/10/20 Update received from D. Thompson. Approximately 110 tons of impacted soil from the dispenser island area was disposed at C/Albany landfill. Expected that the tank installation should be completed by end of the month. Deb is inquiring about whether PBS application could be processed even though spill will remain open pending a groundwater investigation. JG 2/26/20 Email to D. Thompson. I asked

Direction Distance Elevation

vation Site Database(s) EPA ID Number

CENCO STATION (Continued)

S104787542

EDR ID Number

if she has spoken yet with M. Sweeney regarding whether a PBS application could be considered with the spill remaining open until groundwater investigation is performed. JG 3/10/20 Email from D. Thompson to JG, MS, JC & FK requesting a decision whether PBS application would be considered with an interim tank closure report that does not include groundwater assessment. JG 3/12/20 Email from JC to D. Thompson. Facility is in violation for not submitting tank closure report within 30 days. Gave clarification about site assessment requirements. JG 3/16/20 JG site visit. Stopped at site when returning from another spill. Tank top and dispenser aprons were poured, and dispensers have been installed. Site has not been paved. C-store is open but site is not dispensing fuel. JG "

DEC Memo: "7/16/10: I spoke with John Galvin of Albany Tank Services. Removal

of two USTs, one was a 1K heating oil tank, the other was a 1K waste oil tank. He reports that now holes were found in either tank; no indication of a leak noted (no odors, discolored soil, sheen, etc.) Exit sample results came back from the lab, waste oil tank sample all non-detect, heating oil tank had one hit of mp xylene at 5.36 pbb. He will fax sample results to the dispatch desk. Waste oil tank samples did have some hits for metals. I received the sample results and discussed them with Michelle Tipple of HazWaste Remediation. Results from metals test are all below Part 375 standards. Results will be entered into eDocs. All sample results are below DEC guidance values.

No action is required. jod"

Remarks: "Lab Results showing Fuel oil in soil."

Location: The Former Safety Kleen Dry Cleaners Site is an Site Description:

approximately 10.8-acre parcel located at 115 Temple Hill Road in Vails Gate, Orange County, NY. The site is bordered by Temple Hill Road to the east, Route 94 to the south, undeveloped land to the west and a commercially-zoned parcel to the north. Site Features: The site

is a commercially used shopping plaza, with two large retail buildings identified as Building 1 and Building 2 that each house Map ID Direction Distance Elevation

Site

MAP FINDINGS

Database(s)

multiple businesses. Building 1 is oriented north-south on the west side of the site and contains two tenant spaces, a Price Chopper supermarket (suite 400) and a billiards hall (suite 600). Building 2 is oriented east-west on the northern portion of the site and is the location of seven tenant spaces including the former Safety Kleen Dry Cleaner (suite 700), a beauty salon (suite 800), a pizza restaurant (suite 900), a nail salon (suite 1000) and a Radio Shack (suite 1100). A third building, not physically connected with either of the first two buildings, exists on the northeast portion of the site and is utilized for commercial purposes. The site is relatively flat and is entirely paved or covered by structures. A breezeway formerly separated buildings 1 and 2. A Sub-Slab Depressurization System (SSDS) was installed in 2013. Due to the demolition of the former dry-cleaning space in the summer of 2018, some modifications were made to the existing SSDS. The fan was moved, and piping was rerouted to accommodate the new building footprint. Current Zoning and Land Use: The site is a commercially-zoned shopping plaza. A laundry business had been operating in the Former Safety Kleen Dry Cleaners tenant space until the unit was recently demolished as part of an on-site construction project. Surrounding land use is predominantly commercial. Past Use of the Site: The site consisted of undeveloped woodlands or residential areas until approximately 1970 when the existing shopping plaza was constructed. The past disposal practices of a dry cleaner that had operated within the plaza led to a release of tetrachloroethene (PCE) contamination at the site. Site Geology and Hydrogeology: Site soil includes native sands, silt and clay, underlain by a dense till material. A perched groundwater table exists across the site at depths ranging from approximately five to nine feet below ground surface. Groundwater measurements indicate that flow appears to be to the east/north-east, although the gradient of groundwater flow is very small. The ambient groundwater table was not encountered during the investigation. Site borings indicate that it exits at depths greater than twenty feet, which is where the till material was encountered during these investigations.

Env Problem:

Nature and Extent of Contamination: Soil and groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs) and pesticides. Based upon data collected at the site, the contaminants of concern are chlorinated VOCs, including tetrachloroethene (PCE) and its breakdown products, cis-1,2 dichloroethene (cis-1,2 DCE), trichloroethene (TCE) and vinyl chloride. Impacted media include soil, perched overburden groundwater and soil vapor. Soil -Chlorinated solvent contamination was identified in several of the soil borings that were advanced during the remedial investigation. The highest level of contamination was observed in boring SB-MW-7, which is located in the former breezeway adjacent to the former dry cleaner. PCE was detected in this location at 27 parts per million (ppm) in a sample collected from the 13 to 15-foot interval, below ground surface. This exceeds the soil cleanup objective (SCO) for the protection of groundwater for PCE, which is 1.3 ppm, but is below the commercial SCO of 150 ppm. No other VOCs were detected in soil above unrestricted use SCOs. In addition, sampling determined that metals, SVOCs, PCBs and pesticides were not contaminants of concern. Soil contamination generally appears to be localized in the former dry cleaner space, but the potential exists for contamination to exist beneath adjacent structures (suites 600, 800). Site-related soil contamination does not extend off-site Groundwater - In the most

FORMER SAFETY KLEEN DRY CLEANERS (Continued)

recent groundwater sampling event the contaminants of concern were detected in groundwater as high as 79,000 parts per billion (ppb) for PCE (MW-7), 100 ppb for cis-DCE (MW-7), 7.1 ppb for TCE (MW-10) and 150 ppb for vinyl chloride (MW-2). The respective ambient groundwater standard for the contaminants are 5 ppb, 5 ppb, 5 ppb and 2 ppb. SVOCs, metals, PCBs and pesticides were not detected in groundwater above ambient groundwater standards. Due to the low yield of the perched water table, it is often difficult to collect samples before certain wells pump dry. As such, the samples often contained high suspended solids. During the last groundwater sampling event, a settled/filtered sample was also collected from MW-7 and PCE was detected at 16,000 ppb, somewhat lower than the unfiltered sample. Site related groundwater contamination does not extend off-site. Soil Vapor The currently operating sub-slab depressurization systems in both on-site buildings (Buildings 1 and 2) are addressing the potential for soil vapor intrusion (SVI) in five tenant spaces for Suites 600, 800, 900, 1000 and 1100. The SSDS in and adjacent to Building 2 (under former Suite 700 and existing Suites 800 and 900) is also addressing the potential for SVI in Suites 1000 and 1100. During the most recent air sampling event (November 2015), indoor air samples were collected from Suites 600, 700 (the former Safety Kleen building demolished in 2018), 900, 1000, 1100, 1200, and 1300. SSDSs were not installed to depressurize spaces beneath Suites 1200,1300 or 1400. PCE was detected in the indoor air of Suite 600 at a concentration of 0.81 micrograms per cubic meter (mcg/m3), Suite 700 at 8.1 mcg/m3, Suite 900 at 1.6 mcg/m3, Suite 1000 at 0.68 mcg/m3, Suite 1100 at 2.4 mcg/m3, Suite 1200 at 1.1 mcg/m3, and was non-detect at Suite 1300. TCE was detected in the indoor air of Suite 700 (now demolished) at a concentration of 3 mcg/m3, which slightly exceeds the NYSDOH recommended air guideline of 2 mcg/m3 for TCE. TCE was detected in the indoor air of Suite 900 at 0.54 mcg/m3, Suite 1100 at 0.3 mcg/m3, and Suite 1200 at 0.49 mcg/m3. TCE was not detected in the indoor air of Suites 600, 1000, or 1300. Although soil vapor intrusion sampling of Suites 400 and 1300 indicated that no further action is recommended, air monitoring is recommended along with Suite 1200 and Suite 1400 to verify that the current SSDSs do not need to be expanded or new SSDSs are not needed in these four remaining tenant spaces. Soil vapor contamination does not extend off-site.

Health Problem:

Since some contaminated soils remain at the site below concrete or backfill, people will not come into contact with the contaminated soils unless they dig below the surface materials. Contaminated groundwater at the site is not used for drinking or other purposes, and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the soil or groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, if referred to as soil vapor intrusion. Sub-slab depressurization systems have been installed on the two site buildings to prevent the indoor air quality of six tenant spaces from being affected by the contamination in soil vapor beneath the building. Indoor air monitoring is recommended for the remaining three tenant spaces not covered by the SSDSs. Sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Control Code: 13 Control Type: **ENG** Date Record Added: 12/09/2015 Date Rec Updated: 08/06/2020 Updated By: **JYMILLER**

Site Description: Location: The Cornwall Plaza Site is an active shopping plaza located at 19-45 Quaker Avenue, Cornwall, Orange County, Site Features: The

site is a 3.79 acre lot improved with two buildings. One is

approximately 10,950 square feet in size and the other is

approximately 24,000 square feet. Current Zoning and Land Use: The site is zoned commercial and is occupied by a number of businesses including a bank, a pizzeria, a laundromat and a grocery store. A post office is also located in the plaza. The surrounding use is mixed residential and commercial. The local fire department building is located adjacent to the site. Past Use of the Site: A restaurant currently operates in the space previously occupied by the Cornwall Cleaners from 1970 to 1987. Contamination is believed to have resulted from a past release associated with the dry cleaner. Site Geology and Hydrogeology: The site's overburden consists primarily of brown clay and silt with lesser amounts of sand and gravel. A dense till layer is present across the site at depths ranging from 8.5 feet to 15 feet below grade. Bedrock consists of shale and is located at approximately 16 to 20 feet below grade. Groundwater flows in a north/northeast direction and is encountered at approximately 6 to 11

feet below grade.

Env Problem: Nature and Extent of Contamination: Remediation at the site is

> complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE), cis-1,2 dichloroethene(DCE) and trichloroethene (TCE). Groundwater - Contaminated groundwater exists

on-site in the vicinity of the former dry cleaner. The plume is

confined to the overburden. Although the implementation of the remedy has reduced the concentration of contaminants in groundwater, PCE remains in groundwater up to 740 parts per billion (ppb), TCE is present up to 60 ppb and DCE is present up to 260 ppb. The

groundwater standard for PCE, TCE, and DCE is 5 ppb. These detections will be addressed through implementation of the Site Management Plan, which includes contingencies for additional treatments based on monitoring results. Based upon the most recent groundwater results,

Direction Distance Elevation

Site Database(s) EPA ID Number

CORNWALL PLAZA (Continued)

S118372400

EDR ID Number

it no longer appears that the contaminant plume migrates from the site. Soil Vapor Intrusion - Sub-slab and indoor air samples were collected from the on-site grocery store and Chinese restaurant following the installation of the vapor mitigation system. No indoor air impacts were detected. The mitigation system is actively venting contaminated sub-slab vapors to above the roof line. Post installation pressure testing indicates that the system is working effectively. Significant Threat: Based upon the site assessment following implementation of the remedy, the site no longer poses a significant threat to human health or the environment.

Health Problem: Direct contact with contaminants in the soil is unlikely because the

majority of the site is covered with buildings and pavement.
Contaminated groundwater at the site is not used for drinking or
other purposes and the site is served by a public water supply that

obtains water from a different source not affected by this

contamination. Volatile organic compounds in the groundwater may move

into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Although sampling has indicated that impacts to indoor air are currently not a concern, the potential exists for inhalation of site contaminants due to the elevated concentrations of these site related contaminants found in sub-slab soil vapor beneath

these site related contaminants due to the elevated concentrations of these site related contaminants found in sub-slab soil vapor beneath the building. Sampling indicates soil vapor intrusion is not a

concern for off-site structures.

following implementation of the remedy, the site no longer poses a

significant threat to human health or the environment.

Health Problem: Direct contact with contaminants in the soil is unlikely because the

majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that

obtains water from a different source not affected by this

contamination. Volatile organic compounds in the groundwater may move

into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Although sampling has indicated that impacts to indoor air are currently not a concern, the potential exists for inhalation of site contaminants due to the elevated concentrations of these site related contaminants found in sub-slab soil vapor beneath

the building. Sampling indicates soil vapor intrusion is not a

concern for off-site structures.

Site Description: Location: The Cornwall Plaza Site is an active shopping plaza located

at 19-45 Quaker Avenue, Cornwall, Orange County. Site Features: The

site is a 3.79 acre lot improved with two buildings. One is approximately 10,950 square feet in size and the other is

approximately 24,000 square feet. Current Zoning and Land Use: The site is zoned commercial and is occupied by a number of businesses including a bank, a pizzeria, a laundromat and a grocery store. A

EPA ID Number

post office is also located in the plaza. The surrounding use is mixed residential and commercial. The local fire department building is located adjacent to the site. Past Use of the Site: A restaurant currently operates in the space previously occupied by the Cornwall Cleaners from 1970 to 1987. Contamination is believed to have resulted from a past release associated with the dry cleaner. Site Geology and Hydrogeology: The site's overburden consists primarily of brown clay and silt with lesser amounts of sand and gravel. A dense till layer is present across the site at depths ranging from 8.5 feet to 15 feet below grade. Bedrock consists of shale and is located at approximately 16 to 20 feet below grade. Groundwater flows in a north/northeast direction and is encountered at approximately 6 to 11 feet below grade.

Env Problem:

Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE), cis-1,2 dichloroethene(DCE) and trichloroethene (TCE). Groundwater - Contaminated groundwater exists on-site in the vicinity of the former dry cleaner. The plume is confined to the overburden. Although the implementation of the remedy has reduced the concentration of contaminants in groundwater, PCE remains in groundwater up to 740 parts per billion (ppb), TCE is present up to 60 ppb and DCE is present up to 260 ppb. The groundwater standard for PCE, TCE, and DCE is 5 ppb. These detections will be addressed through implementation of the Site Management Plan, which includes contingencies for additional treatments based on monitoring results. Based upon the most recent groundwater results, it no longer appears that the contaminant plume migrates from the site. Soil Vapor Intrusion - Sub-slab and indoor air samples were collected from the on-site grocery store and Chinese restaurant following the installation of the vapor mitigation system. No indoor air impacts were detected. The mitigation system is actively venting contaminated sub-slab vapors to above the roof line. Post installation pressure testing indicates that the system is working effectively. Significant Threat: Based upon the site assessment following implementation of the remedy, the site no longer poses a significant threat to human health or the environment.

Health Problem:

Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Although sampling has indicated that impacts to indoor air are currently not a concern, the potential exists for inhalation of site contaminants due to the elevated concentrations of these site related contaminants found in sub-slab soil vapor beneath the building. Sampling indicates soil vapor intrusion is not a concern for off-site structures.

Site Code: 363847

Site Description: Location: The Cornwall Plaza Site is an active shopping plaza located

at 19-45 Quaker Avenue, Cornwall, Orange County. Site Features: The

site is a 3.79 acre lot improved with two buildings. One is approximately 10,950 square feet in size and the other is

approximately 10,950 square feet in size and the other is approximately 24,000 square feet. Current Zoning and Land Use: The site is zoned commercial and is occupied by a number of businesses including a bank, a pizzeria, a laundromat and a grocery store. A post office is also located in the plaza. The surrounding use is mixed residential and commercial. The local fire department building is located adjacent to the site. Past Use of the Site: A restaurant currently operates in the space previously occupied by the Cornwall Cleaners from 1970 to 1987. Contamination is believed to have resulted from a past release associated with the dry cleaner. Site Geology and Hydrogeology: The site's overburden consists primarily of brown clay and silt with lesser amounts of sand and gravel. A dense till layer is present across the site at depths ranging from 8.5 feet to 15 feet below grade. Bedrock consists of shale and is located at approximately 16 to 20 feet below grade. Groundwater flows in a north/northeast direction and is encountered at approximately 6 to 11

feet below grade.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern

complete. Prior to remediation, the primary contaminants of concern were tetrachloroethene (PCE), cis-1,2 dichloroethene(DCE) and trichloroethene (TCE). Groundwater - Contaminated groundwater exists

on-site in the vicinity of the former dry cleaner. The plume is

confined to the overburden. Although the implementation of the remedy has reduced the concentration of contaminants in groundwater, PCE remains in groundwater up to 740 parts per billion (ppb), TCE is present up to 60 ppb and DCE is present up to 260 ppb. The

groundwater standard for PCE, TCE, and DCE is 5 ppb. These detections will be addressed through implementation of the Site Management Plan, which includes contingencies for additional treatments based on monitoring results. Based upon the most recent groundwater results, it no longer appears that the contaminant plume migrates from the site. Soil Vapor Intrusion - Sub-slab and indoor air samples were collected from the on-site grocery store and Chinese restaurant following the installation of the vapor mitigation system. No indoor air impacts were detected. The mitigation system is actively venting contaminated sub-slab vapors to above the roof line. Post installation pressure testing indicates that the system is working effectively. Significant Threat: Based upon the site assessment

following implementation of the remedy, the site no longer poses a

Direction Distance Elevation

ation Site Database(s) EPA ID Number

CORNWALL PLAZA (Continued)

S108524785

EDR ID Number

significant threat to human health or the environment.

Health Problem: Direct contact with contaminants in the soil is unlikely because the

majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that

obtains water from a different source not affected by this

contamination. Volatile organic compounds in the groundwater may move

into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Although sampling has indicated that impacts to indoor air are currently not a concern, the potential exists for inhalation of site contaminants due to the elevated concentrations of these site related contaminants found in sub-slab soil vapor beneath the building. Sampling indicates soil vapor intrusion is not a

concern for off-site structures.

New Windsor Town: Record Added Date: 03/17/2004 Record Updated Date: 03/28/2011 Update By: **THKNIZEK**

Location Description: The 36 acre Vails Gate facility is situated Site Description: along the eastern side of the New York State Thruway (I-87) and on

the southern side of Route 94. The northern portion(approximately 4.6 acres) is located in Town of New Windsor, and the remaining portion is located in the Town of Cornwall. Site Features: The facility has a 227,000 square foot manufacturing facility built in 1965, with an office/reasearch building on the north side and a storage building on the south side. The southern portion of the site is a cleared area formerly used to store drums. Current Use: The site is currently used

to manufacture floor tiles. Prior owners of portions of the site

include the Rubberoid Co. and GAF Corporation Surrounding Uses: The site is surrounded by commercial and retail properties to the north and east Historical sources of contamination: Environmental Site Assessment (ESA)conducted in July 2003 revealed four areas of concern: 1) the on-site septic system; 2) Former leaking oil/water separator; 3) Scrap equipment and waste materials storage on the exterior portions of the site; and 4) former on-site hazardous waster drum storage area. The remediaton of the oil/water separator was accepted into the BCP. The remediation of the former drum storage area and waste material storage area is covered by an active 1988

RCRA Closure Order. Investigations/Actions completed todate: ESA in

Direction Distance Elevation

vation Site Database(s) EPA ID Number

EDR ID Number

July 2003 and Phase I of remedial investigation in September 2003. The remedial investigation was completed in October 2006. The remediation (excavation and removal of contaminated soil) of the oil/water separator (the BCP part of the project) has been completed. Current Actions: This site was withdrawn from the Brownfield Cleanup Program by the Applicant by a letter dated June 9, 2009, which requested termination of the BCA. RCRA closure activites are on-going on a larger site, of which the BCP is part, and the site remediation will be finished under the RCRA program.

Env Problem: The primary contaminants of concern at the site include mercury,

cadmium, arsenic, chromium, TCA, 1,1-DCA, chloroethane and PCBs. Investigations indicate groundwater and soil contamination to the west, south, and east associated with former oil-water separator, septic system leachfield, and drum storage areas. Exceedances include mercury, cadmium, TCA, 1,1-DCA and PCBs in the soil; and arsenic, chromium, TCA, 1,1-DCA, chloroethane and other volatile organic

compounds (VOCs) in the groundwater.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Number of Days to Update: 20

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Version Date: 2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

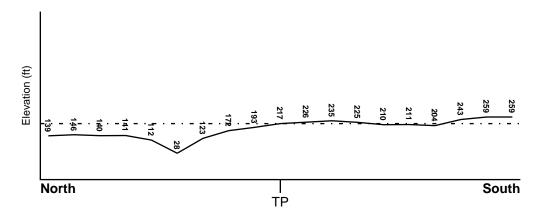

TOPOGRAPHIC INFORMATION

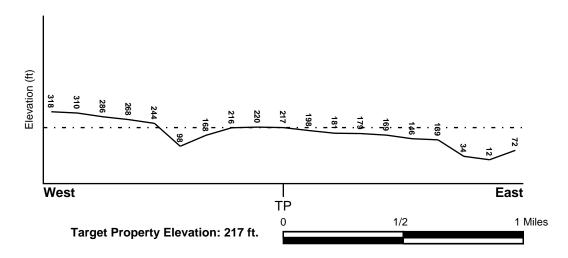

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property Data Coverage

CORNWALL YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

LOCATION GENERAL DIRECTION

MAP ID FROM TP GROUNDWATER FLOW

Not Reported

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOLOGIC AGE IDENTIFICATION

Era: Paleozoic Category: Stratified Sequence

System: Ordovician

Series: Middle Ordovician (Mohawkian)

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

Soil Layer Information									
	Boundary Classification								
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00		

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam

sandy loam loamy sand sand

Surficial Soil Types: silt loam

sandy loam loamy sand sand

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: stratified

gravelly - coarse sand very gravelly - sand coarse sand

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

RE: PUBLIC RECORDS REQUEST of 1/6/2021, Reference # W077170-010621

Date: 01/12/2021

Dear Cailin Bradley,

I write in response to your Freedom of Information Law (FOIL) request seeking:

Site: Undeveloped Land, 2615 US Route 9W, Section 9, Block 2, Lot 25.22, Town of Cornwall, Orange County, NY

I would like to review/obtain copies of records pertaining to spills, environmental investigations, underground storage tanks and aboveground storage tanks for the Site.

No files were found responsive to the address requested for hazardous waste remediation. Note that this property is adjacent to the State Superfund Site Majestic Weaving Corporation (336028). If I can be of further assistance, please contact me at 845 633-5463 and reference FOIL #W077170-010621, or simply reply to this email. Thank you.

Sincerely, Michael Kilmer Region 3 Hazardous Waste Remediation

RE: PUBLIC RECORDS REQUEST of 1/6/2021, Reference # W077170-010621

Date: 01/21/2021

Dear Cailin Bradley,

I write in response to your Freedom of Information Law (FOIL) request seeking:

Site: Undeveloped Land, 2615 US Route 9W, Section 9, Block 2, Lot 25.22, Town of Cornwall, Orange County, NY

I would like to review/obtain copies of records pertaining to spills, environmental investigations, underground storage tanks and aboveground storage tanks for the Site.

Please be advised that a diligent search of the files maintained by DEC produced no responsive records.

If you believe you have been unlawfully denied access to responsive records, you have the right to appeal. Any such appeal must be submitted in writing and within thirty (30) days of the date of this email. Appeals must be directed to:

FOIL Appeals Officer
Office of General Counsel
New York State Department of Environmental Conservation
625 Broadway, 14th Floor
Albany, NY 12233-1500

Your FOIL request is now closed. If I can be of further assistance, please contact me at 845 256-3109 and reference FOIL #W077170-010621, or simply reply to this email. Thank you.

Sincerely,

Region 3 Spills Division

Town of Cornwall. FOIL Application for Access to Records*

INSTRUCTONS TO THE APPLICANT:

The Town of Cornwall considers the provision of access to public documents through the Freedom of Information Law (FOIL) to be an important service and the key to open government. The following instructions outline the Town's process to assure that requested Town records are compiled and presented in an orderly, efficient and timely minner.

How To Request Access to Town Records

Please identify the specific records you wish to inspect or have copied by completing the information requested in the "APPLICANT" portion of the FOIL Application form and present, fax or mail it to the Records Access Officer, Comwall Town Hall, 183 Main Street, Comwall, NY 12518.

How We Process Your Request and When You Can Inspect the Records You Requested

Upon the receipt of this application, the Town Records Access Officer will respond according to the following guidelines:

 Upon receipt of the FOIL application, the Town Records Access Officer will log the request and begin the process of compiling the requested information.

When Records are Readily Accessible

When an Application for Access to Records is presented in person and the requested records
are readily accessible by an authorized Town employee, the requested records will be
presented to the applicant for inspection immediately.

When Records are Not Readily Accessible

• If the requested records are not readily available, the applicant will be advised by mail when the records have been compiled and instructed to call to arrange a time to inspect or pick up copies of the requested records. <u>Please Note</u>: The Town of Cornwall will make every effort to compile and present the requested records for inspection within five business days. If the requested records cannot be compiled within that time frame, the applicant will be notified in writing as to when the records will be made available.

How to Obtain Copies of Records

After Inspection

• If after inspection of the requested records, you should desire copies, identify to the Records Access Officer the specific records to be copied.

Without Inspection

• If the Town record(s) you are requesting is a clearly definable and accessible document, you can have it copied for you without inspection.

In either case, you will be required to pay the established fee of \$.25 per copied page or the actual cost of off-site production when warranted, in advance of your receipt of the requested records.

Your Right to Appeal

- If you are denied access to records or portions of records, you may submit a written appeal to Town Board, Town of Cornwall, Town Hall, 183 Main Street, Cornwall, NY 12518. Please attach a copy of the FOIL Application form showing the "Records Denied" portion completed when filing your appeal.
- * Please Note: The completion of this form is voluntary, however, it will facilitate access to the records you seek

Appendix E Qualifications

David Backman, LSRP

Principal

Environmental Professional

David Backman is a Licensed Site Remediation Professional (#573656) with over 25 years of consulting experience in environmental site assessments, site evaluations, remedial design, remediation services, regulatory compliance, environmental funding, waste management, surveys, land development, and environmental management. He worked on the Measures of Success Steering Committee for the implementation of the Site Remediation Reform Act and served on the LSRPA's Risk Management and Loss Prevention Committee. Also was a member of the Interstate Technology & Regulatory Council for Vapor Intrusion.

Education

• B.A., Environmental Science, Susquehanna University, 1991

Certificates/Licenses

- New Jersey Licensed Site Remediation Professional (LSRP #573656)
- 40-Hour OSHA Hazardous Waste Operations Training
- 40-Hour OSHA Certified Supervisor
- NJDEP Certified: Subsurface Evaluator and Closure
- Certified ASTM's Environmental Audits and Site Assessments Training
- NJDEP Cleanup Star

Professional Affiliations

- · National Groundwater Association of New Jersey
- Association of Engineering and Environmental Geologists
- New Jersey Licensed Site Remediation Professional Association (LSRPA)

Experience Summary

Mr. Backman is a Licensed Site Remediation Professional (LSRP) in the State of New Jersey. He has applied his expertise to projects ranging from industrial and manufacturing companies, banks, engineering and environmental consulting firms, realtors, attorneys, major oil companies, national retail and restaurant chains, developers, emergency response contractors, residential consultation, environmental groups, and class action groups. In addition, Mr. Backman has consulted with a variety of public entities including local municipalities, County Freeholders, and State emergency response and management groups, and federal organizations such as the USEPA, ATSDR and the CDC.

Employment History

Served as a Senior Project Manager to evaluate environmental impacts and the extent of contamination emanating from the Brick Township Landfill Superfund Site, in Brick, New Jersey. Work efforts included the delineation of the contaminant plume, performed feasibility studies, coordinated a human health risk assessment with the USEPA's ATSDR and CDC, coordinate the closure of over 600 private irrigation wells and connection to

municipal water supplies. Assisted the NJDEP and USEPA complete a Record of Decision for the site and ultimate implementation of a remedial cap and installation of a solar cell array for the production of electrical power.

Served as a Project Manager at the State of New Jersey's Ancora Psychiatric Hospital for the closure and removal of 11 UST's ranging in size from 1,000- to 10,000-gallons. Activities included NJDEP notification, registration, subcontractor coordination, oversight of closure activities, and environmental sampling, and completion of a NJDEP UST closure report.

Consulted the State of New Jersey on environmental issues for the closure of the North Princeton Developmental Center. Activities included inventory reconciliation of several storehouses for hazardous chemicals and materials. Documented, classified and sorted chemicals for disposal; recommended disposal options; coordinated subcontractors; and implemented health and safety requirements.

Served as an Emergency Response Coordinator at the North Jersey Developmental Center in response to a release of unknown boiler related fluids at a neighboring surface water body. Evaluated stream impacts and provided oversight for the streambed remediation.

Served as a Project Manager at the Arthur Brisbane Child Development Center in response to a release of diesel fuel from a backup generator in the boiler room. No. 2 heating oil was released into the interior of one of the site's buildings used for educational purposes. Completed remediation efforts, conducted preliminary air monitoring activities to evaluate the release of volatile organic compounds to classrooms. Prepared recommendations for reoccupancy of impacted buildings

Completed a Preliminary Assessment and Environmental Site Assessment at the Monmouth Executive Airport as part of a due diligence effort for the Monmouth County Board of Chosen Freeholders. The project was implemented in order to identify environmental liabilities and quantify environmental remediation costs for potential property transfer negotiations at this 600+ acre site. The results of the rapid assessments identified more than 150 areas of concern and follow up site investigation activities. The results were utilized by the perspective buyers in order to settle on a negotiated sale price while addressing environmental concerns.

Served as a City Liaison and Project Manager for the evaluation of a former YMCA building in Asbury Park, New Jersey. The city of Asbury Park was interested in redeveloping the building to a community youth center. Worked with City officials to secure state funding for the completion of a preliminary assessment and site investigation. The results of the investigation were utilized by city officials to determine the viability of redevelopment. Site work included a remedial investigation of soil gas, near-slab and indoor air sampling to confirm the source of contaminants was an off-site

Page 1

David Backman, LSRP

Principal

Environmental Professional

gasoline filling station location immediately upgradient. Remedial investigation results indicated that the contaminant plume had impacted groundwater and was migrating in the direction of the YMCA building. An open sump in the basement acted as a conduit for vapors to enter the building. Designed remedial alternatives for the redevelopment of the site building to protect occupants against vapor intrusion.

Worked as a consultant for the New Jersey School Construction Corporation for the development of the New Harrison High School. Resulting excavation work resulted in the discovery of a large petroleum contamination plume. Initiated a vapor intrusion investigation associated with a leaking underground storage tank. Upon identifying the USTs as a potential source of volatile organic compounds through soil and groundwater testing, a soil gas survey was initiated. The results of the investigation concluded that while several volatile organic compounds were detected in "near-slab" soil gas samples, the compounds that were detected were not a result of the petroleum release from the UST system. The chlorinated compound detected indicated a secondary source area. Developed recommendations for the elimination of vapor intrusion concerns.

Completed underground storage tank closure of four 20,000 gallon UST and remediation of #6 soil released to the environment at the State of New Jersey's Woodbridge Developmental Center. The project also included the installation of 40,000 gallon capacity replacement ASTs, conducted stack testing on existing boilers for Title V compliance, and development of a SPCC plan.

Freehold Area Health Department Bus Depot Compliance Monitoring, Freehold, NJ: Completed SPCC plan for existing bus depot for the Freehold Area Health Department Bus Depot. Prepared recommendations for AST upgrades and SPCC compliance.

Implemented remediation of impacted soils at the Spring Lake Heights Borough Garage. The scope of work included the delineation of gasoline and diesel fuel impacts to a neighboring surface body and the excavation of impacted soils at the source area.

Responded to a release of X-ray development fluid at the State of New Jersey's Hagerdorn Psychiatric Hospital. Contaminants had penetrated the building's floor and impacted soil beneath the 100-year old structure. Provided structural engineering services in order to access the spill area, remediate impacted soil, and provide proper backfill to ensure structural integrity. Following the initial emergency response, conducted indoor air monitoring and sampling to ensure worker and resident safety from potential vapor intrusion issues.

Conducted a Best Use Determination for approximately 500 cubic yards of petroleum-impacted soil originating from a leaking underground storage tank project at the Hagerdorn Psychiatric Hospital.

Served as an Environmental Client Manager at St. Joseph's Regional Medical Center for the completion of a \$250 million

dollar site improvement project. Tasks included the management of air compliance issues, asbestos abatement, underground storage tank issues, Title V compliance and historic fill.

Assisted environmental emergency response crew with the coordination, management, and remediation of aviation fuel entering a surface water body as a result of an aviation crash incident.

Completed the remediation of a historic, widespread, polychlorinated bi-phenol spill. The work was conducted with NJDEP and USEPA oversight in order to end the client's Administrative Consent Order obligations and proceed with property transfer activities.

Assisted the Borough of Belmar with their successful campaign to designate the Seaport Redevelopment Area as a NJDEP Brownfield Development Area.

Assisted the Township of Woodbridge with their successful campaign to designate the Keasbey Redevelopment Area as a NJDEP Brownfield Development Area.

 Vice President; Birdsall Services Group, Inc., Eatontown, New Jersey November 1996 – April 2013.

Responsibilities included initial site contact, preparing proposals, organizing and coordinating project schedules, collecting and analyzing environmental data, technical evaluations of various field-sampling activities, development of remedial approaches, writing technical reports, and budget and client management. Mr. Backman's role also included business development and growth of the environmental staff.

 Project Manager/Geologist; Land Tech Remedial, Inc., Eatontown, New Jersey 1992 - 1996.

Managed all aspects of environmental issues including, ECRA/ISRA, Phase I property transfer investigations and transactions, emergency response management, site assessments, regulatory review and compliance, remedial design, and engineering and construction. Performed site inspections in various stages of investigation and remediation.

 Field Geologist; Environ Corporation, Inc., Princeton, New Jersey 1991 - 1992.

Conducted field sampling activities including, well installation, test pits, system installation, emergency response remediation, monitoring well and system sampling. Conducted data evaluation and management, prepared technical report and supporting documentation (i.e. figures, tables, bench diagrams) Responsibilities included contract negotiation and subcontractor supervision; supervision of system construction, well installation, and contaminant disposal activities; coordination of state and local permits; equipment procurement; overall budget and billing control; and coordination with regulatory agencies.

Professional Resume - DBackman Page 2

David Backman, LSRP Principal Environmental Professional

Key Project Summaries

Geological, hydrogeological, and environmental compliance management and field support services have been provided on environmental projects to industrial and manufacturing companies, banks, engineering and environmental consulting firms, realtors, attorneys, major oil facilities, national retail and restaurant chains, developers, private concerns, and public agencies primarily on domestic projects.

Environmental management services provided include design and implementation of groundwater investigations and monitoring programs; surface and subsurface geological site evaluations; design and implementation of Phase I Environmental Site Assessments, Phase II Site Investigations, and follow-up soil and groundwater remediation programs; preparation of proposals, permits, and reports; budget preparation, supervision of expenditures, and cost accounting; assistance with consulting company startup; training of personnel; business development and marketing; regulatory liaison; client management and coordinating logistics. Environmental fieldwork has consisted of supervising drilling and well installation activities; management of construction projects; oversight of remediation activities; soil and groundwater sampling; permeability testing; soil gas surveys; and supervision of UST closure and cleanup activities.

Fieldwork on various direct-push techniques, groundwater monitoring well siting and installation, geotechnical sampling completion of geophysical surveys, geotechnical and environmental investigations; soil and groundwater sampling programs, LNAPL investigation and recovery, and trenching and bulk sampling investigations.

Education

 B.S., Biology, The Richard Stockton College of New Jersey, 1996

Certifications/Special Training

- 40-Hour OSHA Hazardous Waste Operations Training with Annual Updates
- "Environmental Audits & Site Assessments", Rutgers University, February 2007
- "Vapor intrusion Risk & Due Diligence Challenges", Edison, New Jersey, October 2006
- "Navigating the New Rules and Tools of the ESA Industry", Edison, New Jersey, September 2004
- "Site Remediation Basics", Rutgers University, February 2004
- Wetlands Assessment Seminar, Rutgers University, October 2001

Experience Summary

Ms. Ryback is experienced in the coordination and performance of environmental due diligence investigations including Phase I Environmental Site Assessments (ESAs); Phase II Site Investigations; Preliminary Assessments; wetlands investigation, delineation, and permitting; and protected, threatened, and endangered species evaluations.

Ms. Ryback has over 17 years of experience in environmental investigation, research, and document compilation, and is well versed in the historical and regulatory requirements of the ASTM E1527 and ASTM E1528 Standards for real estate transactions.

Ms. Ryback has coordinated and performed several hundred environmental due diligence projects for industrial and manufacturing companies, engineers, realtors, attorneys, national retail and restaurant chains, private concerns, and public agencies.

Employment History

- Environmental Scientist; Dynamic Earth, LLC, Chester, New Jersey, February 2014 – Present.
- Environmental Specialist; Whitestone Associates, Inc., Warren, New Jersey, September 1999 – February 2014.

Responsibilities included conducting site reconnaissance efforts and magnetometer surveys; interpreting analytical and historical property data; confirming environmental regulatory compliance status; evaluating areas of environmental concern and recognized environmental conditions; interacting with clients, regulatory agencies and public officials; and report and proposal compilation. Ms. Ryback's role also included assisting the Licensed Site Remediation Professional (LSRP) in the performance of Preliminary Assessment, Site/Remedial Investigations, and Remedial Action activities and preparation of NJDEP submittals.

Performed Phase I ESAs and Phase II Site Investigations in accordance with applicable ASTM E1527 and ASTM 1528 Standards for retail, commercial, and industrial properties throughout the tri-state area.

Supervised the installation of geoprobe borings, monitoring wells, and test pits to facilitate the collection of soil and groundwater samples.

Performed peer review of other consultants work projects.

Prepared and submitted wetlands Letter of Interpretation (LOI) and permit applications.

Conducted a Phase I ESA and Environmental Document Review on an eight acre former chemical manufacturing and petroleum bulk storage facility in Bayonne, New Jersey. The property was a portion of a Brownfields retail redevelopment and had numerous areas of concern and significant soil and groundwater contamination.

Conducted a Phase I ESA and Environmental Document Review on a six acre former manufacturing facility in East Rutherford, New Jersey. The property had numerous areas of concern and significant soil and groundwater contamination.

Oversaw and conducted a Wetlands Evaluation and Threatened & Endangered Species Evaluation at an undeveloped 2.4 acre site in Bridgewater, New Jersey. The site was to be developed for retail use.

Conducted an Environmental Impact Statement for a 10.4 acre site in Hillsborough, New Jersey in order to satisfy Township requirements for a proposed retail property.

Appendix F Questionnaire

User Questionnaire

Complete this questionnaire to address the *user* responsibilities as outlined in the *ASTM Standard Practices* for Environmental Site Assessments: Phase I Environmental Site Assessment Process (E 1527-13).

The *user* is required to perform tasks that will help identify the possibility of recognized environmental conditions. These tasks do not require the technical expertise of an *environmental professional* and are generally not performed by *environmental professionals* performing a *Phase I Environmental Site Assessment*.

In order to qualify for one of the *Landowner Liability Protections* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001, the *user* must provide the following information (if available) to the *environmental professional*. Failure to provide this information could result in a determination that "*all appropriate inquiry*" is not complete.

Are you aware of any environmental cleanup liens against the <i>property</i> that are filed or re under federal, tribal, state or local laws? If yes, explain:	corded YES NO
If yes, explain:	
	-
Are you aware of any activity and use limitations, such as engineering controls, land use in institutional controls that are in place at the site and/or have been filed or recorded in a under federal, tribal, state or local law?	restrictions registry YES NO
	ie 5. 2
nearby properties? For example, are you involved in the same line of business as the curr	ent or
f yes, explain:	
	As the <i>user</i> of this ESA, do you have any specific knowledge or experience related to the nearby properties? For example, are you involved in the same line of business as the currormer occupants of the <i>property</i> or an adjoining property so that you would have specific of the chemicals and processes used by this type of business?

User Questionnaire

	Does the purchase price being paid for this <i>property</i> reasonably reflect the fair market value of t you conclude that there is a difference, have you considered whether the lower purchase price is contamination is known or believed to be present at the <i>property</i> ?	
	Explain:	_
		_
	Are you aware of commonly known or reasonably ascertainable information about the <i>property</i> the <i>environmental professional</i> to identify conditions indicative of releases or threatened release example, as <i>user</i> ,	
	(a) Do you know of past uses of the property?(b) Do you know of specific chemicals that are present or once present at the property?(c) Do you know of spills or other chemical releases that have taken place at the property?(d) Do you know of any environmental cleanups that have taken place at the property?	YES NO
	Explain:	_
		— — — — — — — — — — — — — — — — — — —
	As the <i>user</i> of this ESA, based on your knowledge and experience related to the <i>property</i> are the indicators that point to the presence or likely presence of contamination at the <i>property</i> ?	re any obvious YES NO
